Operating System Question Bank eDAC May 21

| 1) | DDE feature is suppo | orted by | | | |
|------------------|------------------------------------|---------------------------|----------------|-------------------------|----------------------|
| a. | IPC | b. Hard Real Time Sy | stem | c. Microkernel | d. Non |
| 2) | A program that acts | as an interface betwee | en process an | d OS is called | |
| a. | Kernel | b. System call | c. M | icrokernel | d. Virtual Machine |
| 3) | The time sharing ope | erating system is also c | alled as | | |
| a. | Multiprogramming | b. Multitasking | c. Both | d. None | |
| 4) a. | IPC is required in Multiprocessing | b. Single processing | c. Both | d. None | |
| 5) | DDE stands for | | | | |
| э, а. | Distributed Dynamic | Evchange | h Dynamic | : Distributed Exchange | |
| - | istributed Data Excha | - | • | Data Exchange | |
| C. D | istributed Data Excilai | 71 | a. Dynamic I | Data Excitatinge | |
| 6) | A PCB is created whe | en a process is | n IVI | antri | |
| a. | Running | b. Ready | | c. Created | d. None |
| 7) | ISR stands for | | * / L | | |
| , а. | Inter Service Routine | b. Interrupt | Service Routi | ne | |
| c. Ir | nterrupt Set Routin | d. Internal Ser | | | |
| | · | | 7 7 | | |
| 8) | Inter process commu | unication can be done | through | | |
| a. | Mails | b. M <mark>essages</mark> | | c. System ca | alls d. Trap |
| 9) | 9The operating syste | em of a computer serve | es as a softwa | re interface between t | the user and the |
| a. | Hardware | b. Peripheral | | c. Memory | d. Scree |
| 10) | A thread is a | process. | | | |
| a. | Heavy Weight | b. Multiprocess | c. Inter T | nread d. Light | weight |
| 11) | 1 A process said to b | e in stat | e if it was wa | iting for an event that | will never occur. |
| a. | Safe | b. Unsafe | | c. Deadlock | d. All |
| 12) ⁻ | The Hardware mechar | nism that enables a de | vice to notify | the CPU is called | |
| a. | Polling | b. Interrupt | | c. System Call | d. None of the above |
| 13) | IPC stands for | | | | |
| a. | Inner Process Comm | unication | | b. Inter Process Cal | I |
| c. Ir | nter Process Commun | ication | | d. Intra Process Cal | I |

| , | | irces like a printer, mut | | | | |
|------------------|-----------------------------|---------------------------------------|----------------|-------------------------|--------------------|------------------|
| э. | must exist | b. must not ex | ist | c. may ex | ist (| d. None of these |
| 15) 7 | The request and releas | se of resources are | | | | |
| a. | | nents b. interrupts | | stem calls d. | special progra | ams |
| | | a virtual computer is ca | • | d. | special progr | uiiis |
| io, , a. | Virtual Machine | b. Virtual Envir | | c. Both | | d. None |
| J. | VII tuai iviaciiiile | b. Viituai Liivii | Official | c. both | | u. None |
| 17) \$ | Semaphores are used t | to solve the problem of | | | | |
| э. | race condition | b. process synchroniz | zation | c. mutual exclusi | on d. belad | y problem |
| 18) I | In which scheduling po | olicies, context switching | g never takes | place | | |
| a. | FCFS | b. round robi | | ortest job first | | d. Pre-empitive |
| | | | | , | | , |
| 19) ۱ | Which technique was i | ntroduced because a si | ngle job coul | d not keep both the | e CPU and the | I/O devices |
| bus | v? | 77 0 | 70 // | , • / | | |
| э. | Time-sharing | b. Spooling | c. Preempti | ve scheduling d. | Multiprogram | nming |
| | | | 77 | | | 6 |
| 20) | Which of the following | ng memory allocation so | cheme suffer | s from External frag | mentation? | a. |
| _0, | | are demand paging c. | | d. Paging | , merreacion, | . |
| | | are demand paging | on apping | a agg | | |
| 21) | A major problem witl | h priority scheduling is | 7 / | | | |
| , a. | Definite blocking | b. Starvation | 7 7 | c. Low priority | d. None | of the above |
| | Deminica proording | | | of Low priority | | or the above |
| 22) / | A state is safe if | | | | | |
| , <i>,</i> a. | It removes deadlock | b. It detects deadlock | c It a | voids deadlock | d. None | |
| ۷٠ | it removes deadlock | b. It detects deadlock | C. It d | voids acadiock | u. Hone | |
| 23) F | Banker's Algorithm is i | mnlemented to | | | | |
| 23, . 3. | Detect Deadlock | b. Prevent Deadlock | c Avoid Dea | dlock | d. All | |
| ۷٠ | Detect Beddiock | b. Trevent Beddiock | ci Avoia Dea | diock | 4.7 m | |
| 2417 | The disadvantage of m | oving all process to one | and of mam | ory and all holes to | the other dir | ection |
| | | of available memory is | | iory and an noics to | the other an | cetion, |
| - | | · · · · · · · · · · · · · · · · · · · | | CDLLucad | | d All of those |
| d. | the cost incurred | b. the memory used | c. the | e CPO used | | d. All of these |
| 251 (| Samanhora is a/an | to solve the critic | al section pro | hlem | | |
| 23) . 3. | hardware for a syster | | | ogram for a system | | |
| | · | | d. None of th | • | | |
| III | teger variable | | u. None or tr | iese | | |
| 26) v | Virtual memory is norr | mally implemented by _ | | | | |
| _0, | The Carlot Mention y 15 mon | ay mipiemented by _ | · | | | |
| a. | demand paging | | b. buses | c. virtuali | zation | d. All of these |

Operating System Question Bank eDAC May 21

27) When a thread needs to wait for an event it will

| a. Bloc | ck b | . Execute | c. Terminate | d. U | pdate |
|----------------|---------------------|---------------------|-----------------------|---------------------|---------------------------------|
| 28) Pag | ing increases the | time. | | | |
| a. waiti | ing b. e | xecution | c. context – switc | h d. All of | these |
| 29) Sma | aller page tables a | are implemented | as a set of | | |
| a. que | ues b | o. stacks | c. counters | d. re | egisters |
| 30) | is gener | ally faster than | and | | |
| | | | b. best fit, fi | | |
| | | | d. None of these | | F7 |
| 31) The | two steps of a pr | rocess execution a | are : (choose two) | antri | |
| a. I/ 0 | O Burst | b. CPU | Burst | c. Memory Burs | d. OS Burst |
| 32) An I | /O bound progra | m will typically ha | ive: | | |
| • | very short CPU k | 100 | | b. many | very short I/O bursts |
| | y very short CPU | | | | very short I/O bursts |
| | - | | | | |
| 33) The | operating systen | n manages | | | |
| a. M | emory | b. Processor | c. Disk and | I/O devices | d. All of the above |
| 34) The | switching of the | CPU from one pro | ocess or thread to ar | nother is called : | |
| | | | c. context sv | | . All of these |
| ' ' | oatch latency is : | | | | |
| | | | om running to the r | | |
| | | = : | m running to ready | | the CPU idle |
| | • | ne process and sta | ort running another | one | |
| d. No | one of these | | | | |
| 36) A pı | roblem encounte | red in multitaskin | g when a process is | perpetually denied | I necessary resources is called |
| a. de | adlock | b. starv | ation | c. inversion | d. aging |
| 37) A CI | PU bound progra | m will typically ha | ve : | | |
| a. a f | few very short CP | 'U bursts | b. many ve i | ry short I/O bursts | |
| c. many | very short CPU b | oursts | d. a few very | short I/O bursts | |

PG DAC Feb 20 Operating System Question Bank

38) Multithreaded programs are:

- a. lesser prone to deadlocks
- c. not at all prone to deadlocks

- b. more prone to deadlocks
- d. None of these
- 39) To ensure that the hold and wait condition never occurs in the system, it must be ensured that : a. whenever a resource is requested by a process, it is not holding any other resources
- b. each process must request and be allocated all its resources before it begins itsexecution
- c. a process can request resources only when it has none
- d. All of these
- 40) The disadvantage of invoking the detection algorithm for every request is : a. overhead of the detection algorithm due to consumption of memory
- excessive time consumed in the request to be allocated memory
- c. considerable overhead in computation time
- d. All of these
- 41) A computer system has 6 tape drives, with 'n' processes competing for them. Each process may need 3 tape drives. The maximum value of 'n' for which the system is guaranteed to be deadlock free is:

PG DAC Feb 20 Operating System Question Bank

| | 2 | b. 3 | c. 4 | d. 1 |
|--------------------------|--|--|-------------------------------|-------------------------|
| 42) dea | 4A system has 3 pro | cesses sharing 4 resources. I | f each process needs a max | imum of 2 units then, |
| a. | can never occur | b. may occur | c. has to occur | d. None of these |
| and | the sum of all their ma | resources of the same type. The same | than m+n. In this setup, dea | ndlock: |
| a. | can never occur | b. may occur | c. has to occur | d. None of these |
| a. b. c. Al | Abort all deadlocke Abort all processes | ng processes and eliminating d processes me until the deadlock cycle | | that apply) |
| 45) ⁻ | Those processes should | be aborted on occurrence o | f a deadlock, the termination | on of which : |
| a. ′ | is more time consumir | | b. incurs minimum cost | |
| | fety is not hampered | | d. All of these | |
| | , | | | |
| 46) (| Cost factors of process t | ermination incl <mark>ude : (ch</mark> oose | e all that apply) a. | |
| | | eadlock process is holding | an enac apply) | |
| b. | CPU utilization at the | | | |
| C. | | dlocked pro <mark>cess has</mark> thus far | consumed during its execut | tion |
| | | | | |
| | f we preempt a resourcest be: | e from a process, the proces | ss cannot continue with its | normal execution and it |
| a. | aborted | b. rolled back | c. terminated | d. queued |
| - | | tate, the system needs to ke b. roll back the process c. | | · |
| 49) | If the resources are alv | ways preempted from the sa | me process, ca | an occur. |
| a. | | b. system crash | c. aging | d. starvation |
| EU/ - | The colution to stanistic | on is : | | |
| | The solution to starvation | NI IS : ks must he included in the c | rost factor | |

PG DAC Feb 20 Operating System Question Bank

| b. c. d. | the number of resources must be incresource preemption be done instea All of these | | e preemption | |
|------------------------|---|--|--|-----------------------------------|
| Non | The strategy of making processes that preemptive scheduling ortest job first | are logically run b. Preemptive d. First come I | escheduling | suspended is called: a. |
| 52) c. B | Scheduling is: allowing a job to use the processor oth i and ii | | b. making proper u d. None of these | use of processor |
| 53) ^v a. | Which one of the following is not shar program counter b. stac | ed by threads? k mentioned c | . both (i) and (ii) | d. none of the |
| 54) \ | When the event for which a thread is I | olocke <mark>d occurs</mark> , | a. | |
| - | ad moves to the ready queue | b. thread rem | ains <mark>blocked</mark> | |
| c. t | hread completes | d. a new threa | ad is provided | |
| 56) | The register context and stacks of a th | read are dealloc | a <mark>ted whe</mark> n the thread | |
| a. | terminates b. bloc | | | pawns |
| | | | | |
| 57) | Thread synchronization is required be | cause | | |
| a. | all threads of a process share the sar | ne address space | e | |
| b. | all threads of a process share the sar | ne global variabl | es | |
| c. | all threads of a process can share the | same files | | |
| d. | all of the mentioned | | | |
| | The kernel keeps track of the state of | | | a. |
| Proc | | ser control block | | |
| c. M | emory control block d. N | one of the above | 9 | |
| 59) | In the multi-programming environmenta. Greater than 100 | | | number of process. More than one |

PG DAC Feb 20 Operating System Question Bank

| 60) | Which of the follo | wing statemer | nt is not true? | | | | | |
|-------------|-----------------------------------|-----------------------|------------------------------|----------------------|----------------------------|--------------|-----------------------|--------|
| | Aultiprogramming i | - | _ | b. Multi-user c | - | - | _ | |
| c. N | Aultitasking does no | ot imply multip | orocessing | d. Multithrea | ding implies | s multi-use | er | |
| 61) | Saving the state of | the old proce | ess and loading | the saved sta | te of the ne | w process | is called | • |
| | a. Context | Switch | b. State | c. Multi progr | ramming | d. Non | e of the above | |
| 62) | Resource locking _ | · | | | | | | |
| a. | Allows multiple ta | sks to simulta | neously use re | source | | | | |
| b. | Forces only one ta | sk to use any | resource at a | ny time | | | | |
| C. | Can easily cause a | dead lock con | dition | | | | | |
| d. | Is not used for disl | c drives | | | | | | |
| | | C1. | 0 | 1/ | 4 | · A | | |
| | Operating system is | A . 10 11 11 11 11 11 | ıram | IVI a | ntri | | | |
| a | A collection of har | | | . A collection of | • | out devices | • | |
| c. A | collection of softwa | are routines | | d. All of the ab | oove | | | |
| 64) | Piece of code that | only one thre | ad can ex <mark>ecute</mark> | e at a time is ca | alled | | | |
| a. | Mutual Exclusion | b. Critical | Section | C. | <mark>. Syn</mark> chroniz | ation d | . All of these | |
| CE) | I/O function allow | s to ovehange | data directly b | otwoon an | / / | | | |
| 65) | I/O function allow Process States | V = | Registers | | I/O modul | o and proc | essor d. I/o d | ovicos |
| | Frocess states | J. | Registers | / | . I/O IIIOdul | e and proc | essoi u. 1/0 u | EVICES |
| 66) | Memory of compu | iter system fo | r storing provi | des | | | | |
| a. | array of character | s b. array of | falphabets | c. array o | of words | d. array d | of numbers | |
| 67) I | Processor-I/O involv | ves data transi | ferring betwee | n | | | | |
| a. | Computers | | Processor and | | c. Reg | gisters | d. User | |
| | | | | | | | | |
| 68) | Invalid memory | access to com | puter system i | s a | í | a. trap | | b. |
| pro | gram c | . process | d. interrupt | | | - | | |
| | | | | | | | | |
| 69) | The directory co | ntains special | files associate | d with input o | utput devic | es such as t | terminals, line | printe |
| etc | a. /etc b | . /dev | c. /bin | | d. /device | e. /mnt | | |
| 70) cert | The utility progr | am that searc | hes a file, or m | ore than one f | file, for lines | s which con | ntain strings of | a |
| a Fi | • | c t | r d locat | e enr | f search | 1 | | |

PG DAC Feb 20 Operating System Question Bank

| | 71) The Block of every file system contains the major pieces of information about the file system such as file system name , number of blocks reserved for inodes , free inode list etc | | | | |
|-----------|---|---|-----------------|--------------------------------|-------------------|
| a. | Inode block | b. Super block | c. Boot block | d. Data block | |
| 72) l | Jnix OS was first deve | loped at | | | |
| a. M | icrosoft Corp, USA | | b. AT & T Bell | Labs , USA | |
| c. IB | M , USAd.Borlan | | d. Internation | a, USA | |
| 73) I | nternal value associat | ed with the standard e | rror device. | | |
| a. | 0 | b. 1 | c. 2 | d.9 | e.3 |
| 74) | Diameter Control | <i>, , , , , , , , , , , , , , , , , , , </i> | | using which of the following | |
| | dup | b. In | c. name | d. fork | e. cp |
| 751 | Which command dis | nlave all information ab | ant overviews | om process? | |
| 75) | • | plays all information at | | | 0 00 11 |
| a. | ps | b. ps -f | c. ps -ef | d. ps –a | e. ps -u |
| - | • | ich manages the r <mark>esou</mark> nunication lines <mark>and an</mark> | | er system, keep track of the d | isks, tapes, |
| a. | Schedular b. Ker | nel c. Shel | | d. Resource manager | e. System call |
| 77) (| Chmod 754 on a file | V / | | | |
| a. all | ow group and other t | o read , write | b. allow owne | er to only read | |
| c. al | low others to only rea | ad | d. allow grou | up to only execute | |
| 78) | If your process refuse | es to die with kill comn | nand in the nor | mal number, signal number o | ption used is |
| a. | 13 | b.9 | c. 3 | d.0 e.99 | |
| 79) | When we are execut An Interpreter | ing a shell script the sh b. A Compiler | | c. An Operating System d. I | None of the above |
| 80) a. | A null variable X can X= | be created using b.X=" | c.X="" | d. all the abo | ve |
| | | | | | |

PG DAC Feb 20 Operating System Question Bank

d.5

a. halts the system 1 **b.0** c. h 82) What would the following file permissions mean "rwxr-xr—"? a. Read, write and execute permission for everyone. Read, write and execute permission for the file owner, read and execute permission for the group, and only read permission for all others. The file owner is the only one who can execute the file. c. People who do not own the file and are not in its group, can only run it. System and Network d. Administration-I 83) A hierarchical structure consisting of directories and files Track b. cylinder c. partition d. filesystem a. 84) Which of the following is not a component of a user account? home directory b. password c. group ID d. kernel a. 85) The redirection symbol for output is b.< a. c.^ d. | 86) To find out a file's inode number, use this option on the "Is" command. a. i b. -inode c. -inum d. -in By default, "ps" command will list All processes running of a current users in all terminals a. Only processes running in that terminal of the current users b. All processes for all users c. Processes for other users only d. 88) Which of the following is not a major Unix shell? C shell b. WIN shell c. bash shell d. Korn shell

89) The purpose of the PATH variable is to a.

Show the current directory

- Show the directory path of a file
- Tells the shell what directories to search when a command is entered c.
- d. Tells the shell in which directories new file can be created

PG DAC Feb 20 Operating System Question Bank

| | The run configues | uration file in Vi is call b. virc | led | c. bashrc | d. exrc | | |
|-------------|-----------------------------------|---|-----------|---------------------------------------|---------------------------|------------------|----------|
| a. | CSITIC | D. VIIC | | c. basilic | u. exic | | |
| 91) | Use the follow | ing command to save | and exi | t from Vi. | | | |
| | ZZ | b.:w | c. :q! | d. wq | | e. Both a and o | d option |
| 92) | Which of the fo | ollowing Unix utilities | are not | commonly used to p | rocess regular ex | pressions? | |
| a. gr | | b. sed | c. cut | , . | d. awk | • | |
| 02) 1 | Albiah fila aantu | ala tha initialiantian n | | | | | |

| 99) | With a umask v | value of 12, What are brw-rw-r — | | fault permissions assig -xr-xr— dr | gned to newly cre w-rw | eated files? a. | |
| | -VV-AAA | Ø1 W-1 W-1 ─ | C1- | Ai Ai — Ui | VV 1 VV | | |
| 100) | The tar comma | and is used to | | | | | |
| a. | Print the conte | nts of a file | | b. Reformatting a file | e before printing | | |
| | | | | | | | |

PG DAC Feb 20 Operating System Question Bank

a.

c. Making archive tapes

d. Merging a file

101) Which one is not a characteristic of pipes

Connect commands

- Multiple pipes can be used on a command line b.
- Can create individual files for every process output c.
- d. Can also be used with |tee symbol
- 102) To create a hidden file in unix system
- Filename typed in upper case
- c. Filename containing # anywhere

- b. First character of filename is. (dot)
 - d. First character of filename is \$.

- 103) The "nice" command is used to
- Communicate with other users a.
- Improve relationships b.
- Change Priority levels of running processes c.
- Create processese. format a document so that its look nice d.

PG DAC Feb 20 Operating System Question Bank

| 104) The | letters | TCP/IF | stand | for |
|----------|---------|--------|-------|-----|
|----------|---------|--------|-------|-----|

- a. Telecommunication Control Program/Internet Program
- b. Transmission Control Protocol/Internet Protocol
- c. Teleprocessing Conversion Program/Internet Program
- d. None of the above
- 105) Which special variable contains the PID of its own process?
 - a. \$job
- b. \$\$

- c. PID
- d. \$ps
- 106) The process that needs to run in the background as a daemon to ensure that logging happens is:

 telnetd

 b. syslogd

 c. fsck

 d. All of these
- 107) The minimum number of link for a directory is
 - a. 1
- b. 2
- c. 6
- d. 3
- e. 5

- 108) Answer the following:-
- a. What is the difference between the two commands.
- b. \$ cat < fileone > filetwo 2> errorlst
- c. \$ cat > filetwo 2> errorlst < fileone
- d. Ans: It's a same command, the order of redirection make no difference
- 109) What is the meaning of exit status value and how can we access the exit status value of any command Ans: Exit status meaning the command return value to the environment indicatingit is successfully executed or have error

Exit Status value is stored in environment variable \$?

110) Differentiate between Relative path and Absolute path

Ans:Relative path is path relative to the current director, so its start with either. or directory name, Absolute or full path always start with /that is root so user can be in any directory it will direct to that path only Write a command to substitute all occurrences of word "printf "with "cout" from a file myprog.c Anssed'1,\$s/printf/cout/g' myprog.c

- 111) Explain the directories /bin, /dev and /mnt Ans: /bin contains all binary executable file or user utility
 - a. /dev contains all device files of the system
- b. /mnt is a directory for mounting devices
- 112) What is operating system?
- a. collection of programs that manages hardware resources
- b. system service provider to the application programs
- c. link to interface the hardware and application programs
- d. all of the mentioned

PG DAC Feb 20 Operating System Question Bank

| 113) | To access the services of | of operating s | ystem, the i | nterface is provi | ded by the |
|-------|---------------------------------|---|-------------------------------|--------------------|---------------------------------|
| | a. system calls | b. API c. l | ibrary d | . assembly instru | ctions |
| 114) | Which one of the follow | wing is not tru | ıe? | | |
| a. | kernel is the program t | • | | al core of the ope | erating system |
| b. | kernel is the first part of | | | • | <u> </u> |
| c. | | - | = | | running operating system |
| d. | kernel remains in the n | | | | |
| 115) | The systems which allo | ws only one p | rocess exec | ution at a time, a | are called |
| a. ur | niprogramming systems | | b. unipro | cessing systems | |
| c. ur | nitasking systems | C | l. none of th | ne mentioned | |
| 116) | What is the ready state | - MILE MILE MAY 10 - MILE 11 MILE 11 | AR - 30 SEC - 307 - 307 - 307 | Man | tri |
| a. | when process is sched | | | | |
| b. | when process is unable | 0. | some ta <mark>sk h</mark> | as been complet | ed |

| d. | none of the mentioned | | | | |
| 117) | The number of process Output | es completed b. Throughp | | | a. Capacity |
| 118) | The state of a process i | s defined by : | | | |
| a. | the final activity of the | Value of the same | | he activity just e | xecuted by the process |
| | e activity to next be exe | · V | | | ent activity of the process |
| 119) | Which of the following | is not the sta | te of a proc | ess? | |
| a. | New k | o. Old | | c. Waiting | d. Running |
| 120) | The Process Control Blo | ock is: | | | |
| a. | Process type variable | | b. [| Data Structure | |
| c. a | secondary storage section | on | d. a Bloc | k in memory | |
| 121) | The degree of multi-pro | _ | | | |
| a. | • | • | | | of processes in the ready queue |
| c. th | e number of processes | in the I/O que | eue | d. the number | of processes in memory |
| 122) | The objective of multi- | orogramming | is to: (choo | se two) | |
| | | | | | |

PG DAC Feb 20 Operating System Question Bank

Have some process running at all times b. Have multiple programs waiting in a queue ready to run c. To minimize CPU utilization d. To maximize CPU utilization 123) The processes that are residing in main memory and are ready and waiting to execute are kept on a list called b. ready queue a. job queue c. execution queue d. process queue 124) The interval from the time of submission of a process to the time of completion is termed as waiting time **b. turnaround time** c. response time d. throughput a. Which scheduling algorithm allocates the CPU first to the process that requests the CPU first? 125) a. first-come, first-served scheduling b. shortest job scheduling d. none of the mentioned c. priority scheduling 126) Time quantum is defined in shortest job scheduling algorithm b. round robin scheduling algorithm c. priority scheduling algorithm d. multilevel queue scheduling algorithm 127) An interrupt breaks the execution of instructions and diverts its execution to a. b. Counter word register Interrupt service routine c. Execution unit d. control unit 128) How does the processor respond to an occurrence of the interrupt? By Interrupt Service Routine b. By Interrupt Status Routine c. By Interrupt Structure Routine d. By Interrupt System Routine 129) On getting, an interrupt, CPU finishes the current instruction and moves to interrupt service routine immediately moves to interrupt service routine without completing current instruction [b. releases the control on I/O lines and memory lines c. makes the peripheral device, which requested the interrupt wait for fixed interval of time d. 130) Round robin scheduling falls under the category of : Non preemptive scheduling b. Preemptive scheduling c. Preemptive and Non-preemptive d. None of these 131) The portion of the process scheduler in an operating system that dispatches processes is concerned with assigning ready processes to CPU b. assigning ready processes to waiting queue c. assigning running processes to blocked queue d. All of these

132) The FIFO algorithm:

- a. first executes the job that came in last in the queue
- b. first executes the job that came in first in the queue

| c. | first executes the | job that needs minimal pro | ocessor | | |
|-------|--------------------------------------|--|-----------------------|--------------------------------|-----------|
| d. | first executes the | job that has maximum pro | cessor needs | | |
| - | Under multiprogra | ımming, turnaround time | for short jobs is usu | ally and that for lon | g jobs is |
| a. | Lengthened; Short | tened | b. Sł | nortened; Lengthened | |
| c. Sł | hortened; Shortene | d | d. Sh | nortened; Unchanged | |
| a. | memory manager | | b. CPU | c. CPU manager | d. user |
| - | Memory managen in main memory is | • | stem stores and ret | trieves data from secondary st | orage for |
| a. | fragmentation | Shrirb. pagi | Man Man | c. none of the mentioned | |
| 136) | Operating System c. each instruction | maintains the page table on d. each addr | / / | b. each thread | |

PG DAC Feb 20 Operating System Question Bank

| 13 <i>/</i>) a. | operating system | b. CPU | c. user processes | d. All of these |
|------------------------------|---|--|--|-----------------------|
| 138) a. b. c. d. | | ained in a single tained in a single | contiguous section of memory e contiguous section of memory | |
| - | | ded into several | fixed sized partitions, each partit | ion may contain a. |
| exac | tly one process | | b. atleast one process | |
| c. m | ultiple processes at or | nce | d. None of these | |
| the r | In fixed sized partition number of partitions e memory size | b. the | multiprogramming is bounded by CPU utilization All of these | . a. |
| 141) | In internal fragmenta | tion, memory is | internal to a partition and | |
| a. | is being used | No. 1 | t being used c. is always | used d. None of these |
| | J | | | |
| 142) a. b. c. d. | • | I <mark>dress space of a</mark> sses to be allo <mark>ca</mark> | | |
| 143) | External fragmentation | on exists when | | |
| a. | | | y a request but it is not contiguo | us |
| b. | the total memory is i | - | • | |
| c. | • | | nen the total memory is free d. N | one of these |
| a | When the memory al internal fragmentation that it is and b | • | cess is slightly larger than the pro- b. external fragmentation d. neither a nor b | |
| 145) a. | Physical memory is be frames | roken into fixed- b. pages | sized blocks called c. backing store | d. None of these |

PG DAC Feb 20 Operating System Question Bank

| 146) | 1 Logical memory is b | proken into blocks (| of the same size (| alled | • | |
|-------------|-------------------------|----------------------------------|--------------------------|-------------|----------------|----------------------|
| a. | frames | b. pages | c. backing st | ore (| d. None of the | ese |
| 147) | The size of a page is t | ypically: | | | | |
| a. | varied | b. power of 2 | c. power of | 4 (| d. none of the | ementioned |
| 148) | Because of virtual me | | = | | rocesses | b. |
| | threads | c. instructions | d. none of | the menti | oned | |
| 149) | Swap space exists in | | | | | |
| a. | primary memory | b. second | ary memory | c. CPU | mentioned | d. none of the |
| - | When a program tries | s to access a page t | that is mapped in | address sp | pace but not l | oaded in physical |
| a. | segmentation fault o | ccurs b. fatal error | occurs c. pa | ge fault oc | curs d. no e | error occurs |
| 151) | CPU Scheduling is the | e basis of | operating syste | em | | |
| a. | Batch | b. Uniprogrammi | ng c. M | ultiprogran | mming | d. Monoprogramming |
| 152) | CPU performance is r | neasured through | | | | |
| a. | Throughput | b. MHz | 7 / | c. Flaps | | d. None of the above |
| 153) | Process is | | | -// | | |
| a. | Program in high level | l language kep <mark>t on</mark> | disk | | b. Con | tents of main memory |
| | program in execution | 7,000 | | | | in secondary memory |
| 154) | Which among followi | ng scheduling algo | rithms give minir | num avera | ge waiting tim | ne |
| a. FC | FS b. SJF | c. | Round robin | (| d. Priority | |
| 155) | Paging | | | | | |
| a. | solves the memory f | ragmentation prob | olem | b. allow | s modular pro | ogramming |
| c. all | ows structured progra | amming | d. a | voids dead | dlock | |
| 156) | Virtual memory is | | | | | |
| a. | An extremely large m | nain memory | | b. An ex | tremely large | secondary memory |
| c. A | An illusion of extreme | ly large main mem | n ory d. <i>A</i> | A type of m | emory used i | n super computers. |
| 157) | The two steps of a pr | ocess execution ar | e: (choose two) | | | |
| | O Burst | b. CPU Burst | c. Memory Bu | rst d. (| OS Burst | |
| | | | | | | |

| 158) | An I/O bound process will typic | cally have: | | | |
|-------|------------------------------------|---------------------------------------|-------------------------------------|------------------|------------------|
| a. a | few very short CPU bursts | b. n | nany very short I/O b | oursts | |
| c. m | any very short CPU bursts | d. a | few very short I/O b | oursts | |
| 159) | A process is selected from the | queue by the _ | scheduler, | to be executed | |
| a. bl | ocked, short term | b. wait, long term | c. ready, short t e | erm d. | ready, long term |
| 160) | With round robin scheduling a | lgorithm | | | |
| a. | using very large time slices co | nverts it into First com | e First served sched | uling algorithm | 1 |
| b. | using very small time slices con | nverts it into First come | First served schedu | ling algorithm | |
| c. | using extremely small time slice | es increases performar | nce | | |
| d. | using very small time slices cor | nverts it into Shortest J | ob First algorithm | A ^c | |
| | Cha | THE CHARA T | 1 materi | \triangle | |
| 161) | Who is called a supervisor of c | omputer activity? | lunuri | | |
| · | | ating System | | ce / | d. Control Unit |
| 162) | The kernel keeps track of the s | state of each process by | using a data structu | re called a. | |
| , | Process control block | b. User control block | | | |
| c. M | emory control block | d. None of <mark>the abov</mark> e | | | |
| | | | | | |
| 163) | scheduler selects the | e jobs fr <mark>om the pool</mark> of | j <mark>obs and</mark> loads into t | he ready queu | e. |
| a. | Long term b. Short | | Medium term | d. None of the | |
| | _ | | | | |
| 164) | What is Thrashing? | | | | |
| a. | A high paging activity | | b. A hig | gh executing ac | tivity |
| c. Aı | n extremely long process | | d. An ex | ctremely long vi | irtual memory |
| | | | | | • |
| 165) | Poor response times are cause | d by | | | |
| a. | Busy processor | o. High I/O rate | c. High paging | rates | d. Any of above |
| 166) | If process is running currently of | executing, it is in runnir | ng | | |
| a. | Mode b. Proce | SS C. | State | d. Prog | ram |
| 167) | Microkernel architecture facilit | | | | |
| a. | Functionality k | o. Extensibility | c. Reliability | d. Port | ability |
| 168) | Privileged mode of operating s | ystem mode is a | | | |
| a. | user mode b. kerne | l mode c. | system mode | d. both b and o | |
| | | | | | |
| a. | | | | | |

| • | An optimal scheduling a cesses is | algorithm in term | s of minim | izing the average | e waiting time o | of a given set of |
|-------|--|------------------------------------|--------------|---------------------------------|--|-------------------|
| a. | FCFS scheduling algorit | hm | | b. Roun | d robin schedu | ing algorithm |
| c. SI | norest job - first schedul | ing algorithm | | (| d. None of the a | above |
| 170) | Which of the following | memory allocation | on scheme | suffers from Exte | ernal fragmenta | ation? |
| a. | Fixed Memory Partition | b. Dynami | c Memory | Partition | c. Pagin | g d. None |
| 171) | Which of the following | is crucial time wh | nile accessi | ng data on the di | sk? | |
| a. | Seek time b. Rota | ational time c. | Transmissi | on time o | d. Waiting time | 172. A program at |
| 172) | the time of executing is | called | | | | |
| a. | Dynamic program | b. Static pi | rogram | c. Binde | d Program (| d. A Process |
| - | Using Priority Schedulin In their priorities in the o | 1 | W 6 | | A CONTRACTOR OF THE PARTY OF TH | - |
| P3: | 2:4, | | | | | |
| P4: | 1:5, | | | | | |
| P5: | 5 : 2. | | | | | |
| a. | 8 milliseconds | b. 8.2 mill | liseconds | c. <mark>7.75 mil</mark> liseco | onds d | d. 3 milliseconds |
| 174) | A process is created an | d initially pu <mark>t in t</mark> | he | _ | | |
| | ready queue | b. job que | eue | c. I/O qu | ueue | d. None |

| 175) PCB = | |
|--|------|
| a. Program Control Block b. Process Control Blockc. Process | ; |
| c. Communication Block d. None of the above PCB | |
| 176) Dound robin cohoduling is assentially the propagative version of | |
| 176) Round robin scheduling is essentially the preemptive version of | L |
| a. FIFO b. Shortest job first c. Shortes remaining d. Longest time first | L |
| 177) 1 FIFO scheduling is | |
| a. Preemptive Scheduling b. Non Preemptive Scheduling | |
| c. Deadline Scheduling d. Fair share scheduling | |
| | |
| 178) In priority scheduling algorithm | |
| a. CPU is allocated to the process with highest priority | |
| b. CPU is allocated to the process with lowest priority | |
| c. equal priority processes can not be scheduledd. none of the mentioned | |
| d. none of the mentioned | |
| 179) In priority scheduling algorithm, when a process arrives at the ready queue, its priority is compared w | /ith |
| the priority of | |
| a. all process b. currently running process c. parent process d. init proce | SS |
| | |
| 180) 1 Turnaround time is | |
| a. the total waiting time for a process to finish execution | |
| b. the total time spent in the ready queue | |
| c. the total time spent in the running queue | |
| d. the total time from the completion till the submission of a process | |
| 191) Waiting time is | |
| 181) Waiting time isa. the total time in the blocked and waiting queues | |
| b. the total time spent in the ready queue | |
| c. the total time spent in the ready queue | |
| | |
| d. the total time from the completion till the submission of a process | |
| 182) Scheduling is done so as to : | |
| a. increase the waiting time b. keep the waiting time the same | |
| c. decrease the waiting time d. None of these | |
| 183) Response time is | |
| a. the total time taken from the submission time till the completion time | |
| b. the total time taken from the submission time till the first response is produced | |

| c. | the total time taken from submissio | on time till the response is output d. None of these | |
|--------|---|---|-----------------|
| 184) | The FCFS algorithm is particularly tro | oublesome for | |
| a. tir | ne sharing systems | b. multiprogramming systems | |
| c. m | ultiprocessor systems | d. Operating systems | |
| 185) | One of the disadvantages of the prio | ority scheduling algorithm is that : | |
| a. it | schedules in a very complex manner | b. its | |
| sche | duling takes up a lot of time | | |
| | can lead to some low priority proces e of these | ss waiting indefinitely for the CPU d. | |
| - | CPU scheduling decisions takes place | e under following conditions a. When a process switch | es from running |
| a. | When a process switches from runn | ning state to waiting state | |
| b. | When a process terminates | am Mantri | |
| c. | All of the Above | CONTRACTOR CONTRACTOR | |
| | | | |
| 187) | What is meant by throughput? | | |
| a. | Number of processes running in the | syste <mark>m </mark> | |
| b. | Number of process completed per u | unit <mark>time by</mark> the syst <mark>em</mark> | |
| c. | Number of processes waiting for CP | 'U p <mark>er unit t</mark> ime | |
| d. | None of the above | | |
| 188) | When CPU becomes idle which sche | e <mark>duler is</mark> called? | |
| a. S | nort term scheduler b. N | Medium term s <mark>cheduler </mark> | d. Any |
| 189) | What is a medium-term scheduler? | | |
| a. | It selects which process has to be br | rought into the ready queue | |
| b. | It selects which process has to be ex | | |
| c. | • | from memory by swapping d. None of these | |
| | · | | |
| 190) | What is Turnaround time of a proces | ss? a. | |
| Time | e spent in waiting queue | | |
| b. | Time spent in ready queue + waitin | ng queue + running state | |
| c. | Time spent in ready queue + waiting | g queue | |
| d. | Time spent in ready queue | | |
| 191) | Which scheduler selects which proce | esses should be brought into the ready queue? | |

| a. Re | eal-term | | b.Long-term | c. Mediur | n-term | d.Short-tern | า |
|-------------|---------------|------------------------------------|-------------------------|---------------------|-------------------|-------------------|------------------------|
| 192) | A page fau | It occurs | | | | | |
| a. , | . • | page is not in | the memory | | | | |
| b. | | page is not in page is in the r | - | | | | |
| | | | • | tata | | | |
| c. | | | the blocked s | tate | | | |
| d. | when the | process is in th | ie ready state | | | | |
| 193) | A CPU bou | nd process wi | ll typically have | e | | | |
| a. m | any very lo | ng CPU bursts | 5 | b. many v | ery short I/O bu | ursts | |
| c. m | any very sh | ort CPU burst | S | d. a few v | ery short I/O b | ursts | |
| 194) | The chunks | s of a memory | are known as | | | | |
| a. Se | | | | c. Page | d. Frame | | |
| | | | | to preventing pag | | · A | |

| 220) Which | i register is use f | or memory mar | nagement? | | | | | |
|---------------------|---------------------|---------------------------------|------------------------------------|------------------------------------|------------------------------------|----------------------------|--|--|
| a. base reg | ister | | b. bound register and stack pointe | | | | | |
| c. base and | d bound register | uit | d. bas | d. base and stack pointer register | | | | |
| 221) What | is the use of the | program count | er register? | ' a. | | | | |
| It points to | the next progra | m in the execut | ion | | | | | |
| b. It poi | nts to the next i | nstruction state | ement in th | e program | | | | |
| c. It poir | nts to the next b | lock of code in t | he execution | on | | | | |
| d. None | of the above | | | | | | | |
| 222) Which | of the following | stack operatio | n could res | ult as stack | underflow/ | | | |
| a. is empty | , k | . pop | c. push | d. Two | or more of the abo | ve answers | | |
| 223) Which | ı statement is tru | ıe? | | 7 / | - 4 | | | |
| a. Cache m | emory is type of | the nonvolatile | e memory | // b.1 | RAM stands for relia | able access memory | | |
| c . Cache re | sides between n | nain memory a | nd CPU | d. Har | <mark>d disk is made u</mark> p of | different layer of the RAM | | |
| 224) Durinį | g process execut | ion, which state | transactio | n, is not po | ssible? | | | |
| | ate to running st | | | | ite to block state | | | |
| c. block sta | ate to terminate | state | d. | block state | to ready state | | | |
| | | | | | | | | |
| 225) What | is process contro | ol block? | | | | | | |
| a. It is d | ata structure tha | t represents t <mark>h</mark> | e process | | | | | |
| b. It is a | data structure, v | which is part <mark>of</mark> | the user sp | ace <mark>, and it</mark> r | represents the proce | ess | | |
| c. It is a | data structure, | which is pa <mark>rt o</mark> f | the kernel | space, and | it represents the p | rocess | | |
| d. It is no | ot a data structu | re which can be | e in virtual a | iddress spa | ce it represent the p | process | | |
| 226) Paging | g leads to | | | | | | | |
| a. Internal | fragmentations | b. Ext | ernal fragm | nentations | c. Both 1 & 2 | d. All of the above | | |
| 227) Intern | al Value associat | ted with the sta | ndard erroi | device | | | | |
| a. 0 | b. 1 | c. 2 | | l. 9 | e. 3 | | | |
| 228) The re | direction symbo | I for output is | | | | | | |
| a. > | b. < | c. ^ | C | d. | | | | |
| 229) Which | n command will l | be used to displ | av the curre | ent user id a | and name? | | | |
| a. Wh | | b. Which | - | Who am i | d. where is | | | |
| 230) As an | abstraction, who | at operations a | oply to proc | esses? | | | | |
| a. create | b. ex | • | status | | of the above | | | |
| | | | | | | | | |

| 231) | Which comma | nd allow you to determii | ne if a host is connected | to the intern | et? |
|-------|----------------------|---|----------------------------|--|--------------------------|
| | a. cmd d. pwd | b. Is-la | c. ping | | |
| 232) | Computer that called | : handles concurrent use | rs and multiple jobs are | | |
| a. C | lient | b. Network Client | c. Network serve | e rs d | . All of the above |
| 233) | Which of the fo | ollowing make up DOS? | | | |
| a. B | oot files | b. File Management | files c. Utility files | d. All of the | above |
| 234) | The file assign4 | I.html has permissions to | o set as r w x r w x r w x | a. | |
| The | file is really a di | rectory and was named | incorrectly | | |
| b. | Everyone can | read, write, and execute | the file | / | |
| c. | It is impossible | read, write, and execute for a html file to have p | ermissions set that way | 1111 | |
| d. | The file can no | t be viewed on the WW\ | W | | |
| | | | | | |
| 235) | | ollowing is true for DLLs? | | | |
| a. | • | loaded in to random acc | | <mark>ith</mark> the main _l | orogram |
| b. | | omote developing modu | lar programs | | |
| C. | Both 1 and 2 | | | | |
| d. | None of the ab | oove | | / | |
| 2261 | On a single pro | cessor multi-threading g | ronorally occurs by | | |
| - | = - | ltiplexing b. Multi proc | | hing | d. None of the above |
| | | | | | |
| 237) | The ability of a | n Operating System to e | xecute different parts of | a program si | multaneously is known as |
| a. N | 1ulti - Tasking | b. Multi progr | amming c. Multi - | - Threading | d. Multi – scheduling |
| 238) | Which of the fo | ollowing is main objectiv | e of Disk Scheduling? | | |
| a. T | o minimize seel | c time | b. To maximize turna | around time | |
| c. To | o minimize thro | ughout | d. To maximize band | lwidth | |
| 2391 | In which of the | following condition dea | dlock will occur? a. | | |
| | | nd wait; pre-emption; ci | | | |
| b. | Mutual exclusi | on; hold and no wait; pr | e-emption; circular wait | | |
| c. | | ion; hold and wait, pre- | • | | |
| d. | Mutual exclusi | on; hold and wait; non p | re-emption ; circular wa | it | |

| | Which command will b | • • | | · · | d Nana of the al | 2010 |
|-------|--|-------------------------------------|-----------------------------|------------------------------|---|--------------|
| a. Da | ate-fri | b. Date-d fri | c. Cal- | u iri | d. None of the al | oove |
| | Which command will I a. Cut [option][FILE] | b. Print [op | otion][FILE]. | •• | ch FILE to standard | output? |
| C.CII | ip (option)(FILE) | a. Comm. jopt | 1011][FILE] | , | | |
| 242) | Multiplexing of a singl | e physical resource ir | nvolves | | | |
| | ombining resources bas | | | | g resources based | on space |
| c. Di | viding the resource bas | sed on time or space | | d. All of the | above | |
| 243) | When the processor is | in user mode, all add | dresses are | | | |
| a. Ph | ysical address | b. Logical address | c. Abso | olute address | d. Memory addr | ess |
| 244) | What is an interrupt? | 77 0 | - | | - A | |
| | It is an immediate tran | nsfer of control cause | d by an even | t in the syste | m7 | |
| | Some interrupts can o | | | | AT A STATE OF THE | |
| | d. None of the above | | | | | |
| | | | | | | |
| 245) | Plan ahead so that y | ou never get into a <mark>si</mark> | <mark>ituatio</mark> n wher | re <mark>deadloc</mark> k is | inevitable is called | l as |
| a. D | eadlock prevention b |). Deadlock avoida <mark>nce</mark> | c. Deadlock | c <mark>recover</mark> y d. | Avoiding Mutual e | xclusion |
| 246) | In which cituation a | process is provented | from process | ding bossuss | sama athar praca | es always |
| , | the resources it needs | process is prev <mark>ented</mark> | from procee | uing because | some other proces | os aiways |
| | cking | b. Deadlock | c Star | vation | d. Blocking | |
| a. Lo | CKIIIG | b. Deddiock | c. Star | vacion | d. Blocking | |
| 247) | Which of the following | statement is false? | | | | |
| - | A smaller page size lea | | ıbles | | | |
| b. | A smaller page size lea | ads to move TLB miss | es | | | |
| c. | A smaller page size lea | | | | | |
| | A smaller page size re | duces paging I/O thro | oughout | | | |
| 248) | Anything that can be u | used by only a single i | nrocess at an | v instant in ti | me is called as | |
| 2 10, | a. Memory | b. Thread | 01000000 01 011 | c. Space | | d. Resources |
| | , | | | ' | | |
| 249) | det | termines which proce | ss gets CPU a | and when | | |
| a. Di | spatcher | b. Scheduler | c. Allocato | or d | . Process allocator | |
| 250) | Which method is used | to eliminate fragmer | ntation after i | it occurs? | | |
| | empaction b | - | | | the above | |

| 251) Which method is u | used by memory to imp | prove disk perform | nance is used? | |
|--|--|--------------------|---------------------|--|
| a. Disk Scheduling b. [| Disk caching | c. Both 1 & 2 | d. None of the a | above |
| | external fragmentation a process to be allocat | • | | |
| 253) 253. Which metho | od is used by a program | to make request | to operating syste | em? |
| a. System call | b. CPU call | c. Memory I | Management | d. Interrupt call |
| 254) The ability of a cor when a large portion of a. Fault tolerance | f it has been destroyed | - | lled as | n limited functionality ever d. Denial of services |
| | Shrira | m Mo | untri | |
| 255) Memory allocation | | 7 / / . / | | |
| ·• | es specification of mer nore general action kno | 7. 6 | its instructions ar | io data |
| c. Both 1 & 2 | iore general action kne | own as binding | | |
| d. None of the above | e | | | |
| | | | | |
| 256) Which type of bind | | | | |
| a. Static binding | b. Dynamic <mark>binc</mark> | ling c. Synch | ronous binding | d. Asynchronous binding |
| 257) Which of the follo | wing statement is true | for dynamic alloc | ation? | |
| a. Allocation is perform | red during execution of | f a program | b. Allocation | exactly equals data size |
| c. No wastage of memo | ory | | d. All of t | he above |
| 258) Pre-emptive sched | = - | | | |
| a. To allow starving pro | | | e CPU time slice e | xpires |
| c. When it requests I/C |) | d. When into | errupt occurs | |
| 259) The memory alloc | ated to a process conta | ains | | |
| a. Code and non static | data of the program to | be executed | b. Stack | |
| c. Program controlled b | y dynamic data | | d. All of | the above |
| 260) Which of the follo | wing mode is performi | ng I/O operations | ? | |
| a. Interrupt mode | b. Running mod | = - | ory access mode | d. Safe mode |
| 261) When a process to | erminates and all it's ch | ild process must a | also be termed thi | s situation is called as |

| a. Child termination | b. | Child parent termi | nation | |
|--|---------------------------------------|--|---|-------------------------------|
| c. Spawn termination | d | I. Cascading termin | ation | |
| 262) Which of the followin | g register contaiı | ns address of the n | ext instruction to be | executed by the CPU? |
| a. Program counter regist | er b. | CPU registers | c. Control regist | er d. Condition code register |
| 263) When an interrupt ar | = | ecution and the sch | eduler selects some | other program for execution |
| a. Preemption | b. Nor | n Preemption | c. Priority | d. Interrupt Processing |
| 264) 264. Page-replacements a. Memory contraction c. Memory protection | b. Compile tin | vides ne relocability f the above | | |
| 265) Swap space resides in a. SRAM b. DRA 266) Which of the followin a. LRU b. O | | oy Linu <mark>x for page re</mark> | | |
| 267) Which of the following1) Dirty buffers in the di2) Each buffer in the case3) The vnode data struct | sk cache are writ he has not a buf | t <mark>en to th</mark> e cache w f <mark>er hea</mark> der that is a | <mark>llocat</mark> ed in a slab of | the slab allocator |
| 268) A process sends data receiver. This type of transa. Synchronous | • | | does not wait till the d. None of the a | · |
| a. Syncinonous | b. Asylicili olious | c. blocking | d. None of the a | bove |
| 269) Which command wou a. mkdir b. dir | - | ate a sub-director in rm | n your home directo | ry? |
| 270) Which command will a. calendar b. c | | ar? d. view cal | | |
| 271) The interval between | en submission of | a request and the | first response to tha | t request is called as |
| a. Turnaround time | b. Time delay | c. I | Response time | d. Request time |
| 272) A unique number is size and location of the fil | | | de table which gives | information on the type, |
| | b. Inode | c. Inode number | d. All of the | above |

| 273) | Which of the follo | wing controls | the degree o | f multi programr | ming? | |
|------------------------|---|--|------------------------------|---|--|-------------------------|
| a. Lo | ong term schedule | r | b. Short t | erm scheduler | c. Both 1 & 2 | d. None of the above |
| 274) | How can you view | the permission | on-settings or | all files in the c | urrent directory? | |
| a. di | splayall | b. Is-I | c. listall | d. listdi | r | |
| 275) | Which command | sends file con | tent to standa | ard output and li | st the content of sho | rt files to the screen? |
| | a. echo | b. cp | | c. cat | d. None of th | ne above |
| 276) | Which of the follo | owing stateme | nt is false? | | | |
| a. | Virtual memory i | s used only in | multi-user sy | stems | | |
| b. | Segmentation suf | fers from exte | rnal fragmen | tation | | |
| c. | Paging suffers fro | m internal fra | gmentation | | | |
| d. | Segmentation me | mory can be p | oaged | 74 // | | |
| | | onr | iran | 1 IVI a. | ntri | |
| | | | | d scheduling pol | i <mark>cy, I/O bound proce</mark> s | sses may have to wait |
| long | g in the ready queι | ie waiting for a | a CPU bound | job to finish? | | |
| a. A | ging | b. Prio | rity inversi <mark>on</mark> | c. Pr | riority Inheritance | d. Convoy effect |
| prod a. th c. nu | How can we detected in a virtual medical instruction set a sumber of processed Bootstrap loader | emory environ architecture s in memory | 1 . /. | er of page frame b. page size d. physical mei | es that must be allocations and the second s | ated to a running |
| a. A | program, which re | sides in the us | ser space | b. A progra | m, which resides in | ROM |
| c. A | program, which re | sides in the RA | MA | d. A progra | m, which is a module | e of the kernel space |
| | POSIX pthread lib threads without t | | | x schedules | a. | |
| b. | user threads with | the help of lig | tht weight pro | ocess | | |
| c. | user threads with | the help of ke | ernel | | | |
| d. | user threads with | the help of he | eavy weight | | | |
| 281) | Segmentations le | ads to | | _ | | |
| a. Ex | cternal fragmenta | tion | b. Internal fr | agmentation | c. Both 1 and 2 | d. all of the above |
| 282) | What is the funda | mental sched | uling block fo | r operating syste | em? | |
| a. Ke | ernel thread | b. F | Process Contr | ol Block (PCB) | c. Light Weight | Process d. User thread |

| 283) | Which inter pro | cesses Communication mec | hanism is fastest t | to exchange the da | ta between processes? |
|---------------|-----------------------|--------------------------------|----------------------|----------------------|--------------------------|
| | a. PIPE | b. FIFO | c. Share | ed Memory | d. Message Queue |
| 284) | What ping comr | nand does? | | | |
| a. | | CHO_REQUEST to network | hosts | | |
| b. | | CHO_REQUEST to network s | | | |
| D. С. | | on ECHO REQUEST to networks | • | | |
| d. | | on ECHO_REQUEST to netwo | | | |
| u. | it serius reivii Tit | on teno_ktegotsi to netwo | ork severs ormy | | |
| 285) | How can we find | d out the free space size to ι | ıse on Linux Syste | em hard disk partiti | on? |
| | a. df-hs | b. freedisk-hs | c. fdisk | -hs d. N | lone of |
| | the above | | | | |
| 286) | How can we get | the information about the (| CPU on the Linux | svstem? | |
| - | t /usr/cpuinfo | | | oot/proc/cpuinfo | d. cat /root/usr/cpuinfo |
| u. 0 | c , a.o. , op a | Shriran | | ntri | |
| 287) | Loader is use to | Dilliun | L TATELL | | |
| a. , | | from harddisk to main mem | orv | | |
| b. | | riate program into the mai | • | | |
| c. | | ess and load in to the main r | | | |
| d. | • | ogram ready to load and load | | ry is done by anoth | ner Process |
| | | | 7 / | 7 | |
| 288) | Where the main | system message log file info | ormation get stor | ed? | |
| - | ar/log/message | | sr/log/message | | src/log/message |
| - | | 289) Which command can | | | |
| | utdown-r now | b. Shutdowi | | c. init 0 | d. init 6 |
| | | | | | |
| 290) | What type of file | e system Linux is using? | | | |
| a. F <i>A</i> | T-32 | b. NTFS | c. LFS | d. Ext3 | |
| 204\ | NAVIs at the attended | al a saletta at the Control of | | | |
| • | icro kernel | el architecture for Linux? | a Manalith | aio kornol | d Unbridkorool |
| a. IVI | icro kernei | b. Macro kernel | c. Monolith | nic kernei | d. Hybrid kernel |
| 292) | What happens w | hen a page fault occur for a | ı valid legal virtua | l address? a. | |
| | ess will terminate | · = | | | |
| | ocess will block | | | | |
| b. | None of the abo | ve | | | |
| c. | | restart after the page is bro | ought to the main | memory and page | table entry will |
| 2021 | Virtual mamara | with paging machanism (no | uga ranlacamant t | tochniquo) provido | c |
| - | ntime relocatabi | with paging mechanism (pa | - | c. memory provide | |
| a. ru | mine relocatabl | ncy D. III | CITIOTY EXCENSION | c. memory prote | ction u. An of the above |

| 294 |) Which of the fol | lowing stack operati | ion could re | esult as stack | c underfl | ow? 1 | |
|-------|---------------------|------------------------|----------------|-----------------|------------|--|---|
| a. is | s_empty | b. Pop | c. P | ush | d. ٦ | wo or more of the above answers | |
| 295 |) How can we find | d out the free space | size to use | Linux systen | n hard di | sk partition? | |
| a. c | lf-hs | b. freedisk-hs | (| c. fdisk-hs | d. | None of the above | |
| | | _ means that the da | | | | orded when an object of the subclass in piect? | S |
| | Slicing | b. Up casting | | c. Down Cast | | | |
| 297 |) Which CPU sche | duling algorithm is r | non- preem | ptive type fr | om the | following? | |
| 4) a | . Shortest job firs | t scheduling | | b. Ro | und rob | in scheduling | |
| c. P | riority based sche | eduling | (| d. First come | e first se | rve based scheduling | |
| ാറം |) Which custom of | all will you use to ge | t the peron | t of the proc | 2000 | 747 | |
| | | | | A V AL 10-7 | .ESS! | d. None of the above | |
| a. g | getp() | b. getppid() | c. getp | arentid() | | d. None of the above | |
| 299 |) m | eans that the data a | dded by a | subclass are | discarde | d when an object of the subclass is | |
| | | by value or from a fu | | | | | |
| a. S | licing | b. Up casting | c. Dowr | n Casting | | d. Name mangling | |
| 300 |) 300. Which state | ement is false? | | | | | |
| a. | • | a tree associated w | ith a netwo | ork | | | |
| b. | A minimum spa | | | | hat the t | otal edge weight between nodes is | |
| | nimized | | اه مطلا ممینات | a subset diete. | | voor any 2 area; find redoc d. Nore | |
| C. | of the above | iing tree of a graph į | gives the sr | iortest distai | nce betv | veen any 2 specified nodes d. None | |
| 301 |) An array is havir | ng 12 elements, wha | t will be th | e maximum | number | of comparisons that | |
| a. 1 | | | c. 11 | | | | |
| 302 |) Normally, when | a hardware interrug | ot occur | | | | |
| a. n | node switch and o | context-saving occur | • | b. context-sv | vitch and | d context-saving occur | |
| c. B | Soth 1 & 2 | _ | | d. None of th | | _ | |
| 303 |) What happens v | vhen a page fault oc | cur for an i | nvalid illega | l virtual | address? a. | |
| | cess will terminat | . • | | | | | |
| b. | Process will bloo | ck | | | | | |
| c. | All of the above | | | | | | |
| d. | The process will | restart after the pa | ge is broug | ht to the ma | in memo | ory and page table entry will update. | |

| 304) | signal generate | when we try to acce | ss the illegal memor | y location using invalid pointer |
|--|--|-------------------------------------|------------------------------------|----------------------------------|
| a. SIGSTOP | b. SIGSEG\ | / c. | SIGTERM | d. SIGNULL |
| 305) An array is h Merge sort? | aving 12 elements, v | vhat will be the maxi | mum number of con | nparisons that required in |
| a.144 | b. 11 | c.12 | d. 13 | |
| the exceptions into b. display an erro | a file and continue or message and halt pord containing an er | analysing transactior processing | | error, it should a. write |
| 307) inode number | represents | 71 / | | (|
| a. the directory on t | the file system uniqu | iely b. all | types of files on the | file system uniquely |
| c. all process running | ng on the system | d. use | of the code in thefil | e system |
| 308) Which of the fo | ollowing is a false sta | tement about binary | tree? | |
| a. Every binary tree | has at least one noc | de b. Eve | ery <mark>non-em</mark> pty tree h | as exactly one root node |
| c. Every node has at | t most two children | d. Ev | e <mark>ry non-r</mark> oot node h | as exactly one parent |
| 309) Drivers constitu | ute which part of the | E Linux Operating Sys | tem? | |
| a. Kernel | b. Shell | c. Application | | |
| 310) Which is the de | efault shell used by t | he Linux OS? | | |
| a. KSH | b. BASH | c. SSH | d. ASH | |
| 311) Which commar | nd will list out all file | s including hidden fil | es? | |
| a. ls -l | b. Is –A | c. ls -r | d. Is -a | |
| 312) To copy a direc | ctory instead of a file | which switch is used | l in cp? | |
| aa | b. –v | cR | dc | |
| 313) Which one of t | he following uses a r | relative path? | | |
| a. /root | b. /var/lib/ c. / | | d. /scripts | |
| • | | ectory he is currently | . <u> </u> | |
| a. cwd | b. ı | mv c. | pwd | |
| d. Is | | | | |
| 315) Which comma | nd is used to rename | e a file? | | |

| a. ren | b. cp | c. mv | d. none of the above | | |
|---------------------------|-------------------------|---------------------------|----------------------------|-----------------------------|----------------|
| 316) Which comma | | • | • | | |
| a. del | b. rm –R | c. rm | d. rmdir | | |
| 317) Which of the f | ollowing comr | nands is correct | ? | | |
| a. more emp.db o | cut -f 3 | b. c | cut -f 3 -d " " | | |
| c. more emp.db > c | cut -f 3 -d " " | d. mo | ore emp.db > cut -f 3 | | |
| 318) The touch com | nmand update | s what? | | | |
| a. modification tim | ne and access t | t ime b. | . access time only | | |
| c. modification time | e only | d. no | ne of the above | | |
| 319) Which comma | nd creates an | archive and com | • | | |
| a. tar | b. zip | c. gzip | d. none of the a | bove | |
| 320) The command | to change the | ownership is | t IVI artti | | |
| a. chgrp | b. chmod | c. takeown | d. none of the abov | ve / | |
| 321) chgrp does wh | nat? | | | | |
| a. Changes the owr | | a new grou <mark>p</mark> | c. Changes the | access rights d. non | e of the above |
| 322) chmod does w | hat? | | | | |
| a. updates the mod | | b | o. changes the access righ | its | |
| c. updates the acce | | | . Both a & c | | |
| 323) How can read c. 5 | , write, execut d. : | | sion be represented in nu | imeric form? a. 0 | b. 7 |
| 324) Which comma | and is used onl | v to save a file ir | n vi editor? | | |
| a.:wq | b. :q | c. :qa! | d. none of the abo | ve(:w) | |
| 325) Which comma | and is used to (| copy a block of t | ext in vi editor? | | |
| a. y b. | | · · | one of the above(yy) | | |
| , | | | | | |
| 326) Which comma | nd is used to s | tart marking line | es in vi editor? | | |
| a. ALT + v | b. CTRL + v | c. SHI | IFT + v d. none | of the above | |
| 327) Which comma | nd is used to s | tart marking a re | egion in vi editor? | | |
| a. ALT + v | b. CTRL + v | c. SHI | IFT + v d. none | of the above | |

| 328) Which sho | ould be the | | • | • | | 6.1 |
|------------------|----------------------|-----------------|------------------|----------------------|--------------|-----------------------|
| a. !#/bin/bash | | b. /bin/l | | c. #!/bin/bash | d. n | one of the above |
| 329) Which of t | | • | • | | | |
| a. &0 | b. \$0 | c. @0 d. | none of the a | above | | |
| | | | | | | |
| 330) Which of t | the followir | ng arithmetic | c expression is | correct? | | |
| a. \$i=((i+1)) | b. i | =((i+1)) c | :. i=\$((i+1)) | d. none of the | above | |
| | | | | | | |
| 331) Which is a | valid state | ment in a sh | ell script? | | | |
| a. echo "My na | | | • | =13 d. none | of the abo | ove |
| • | • | | · | | | |
| 332) Which is N | JOT a valid | statement ir | n a shell scrint | ? | | |
| a. echo | b. 122=I | c. i=1 | | d. none of the abo | N/A | |
| a. ccno | D. 122-1 | C. 1–1 | L -7 / | u. Horic of the abo | JVC | |
| 222\ \A/b;ab aa | | مد اممین مما می | | alaw af +b a +au+h | ممسمم طمئر | M |
| | ommand ca | 1 11 | | olor of the text wh | A | |
| a. echo | A | b. color | ram | c. tput | d. nor | ne of the above |
| | V | | | | | |
| 334) The if con | struct alwa | ys ends with | 1? | | | |
| a. end if | | b. stop | c. if | d. none of the | above(fi) | |
| | | | | | | |
| 335) The else p | art of the i | f construct e | nds with? | | | |
| a. end else | | b. stop | c. esle | d. none of the | above(fi) | |
| | | N. | | | | |
| 336) While test | ing an inte | ger variable | what does -lt | indicate? | | |
| a. last | b. less tha | - | c. last value | | he ahove | |
| a. 145t | Di less till | | c. last value | d. Horic of t | ine above | |
| 227\ \Which ic a | valid varia | blo namo in | a shall serint? | | | |
| 337) Which is a | | | | | میره ماه مطا | |
| a.123var | D. \ | var* | c. \$var | d. none of | ine above | |
| | | | | | | |
| 338) Which is a | | | | | | |
| a. more file.txt | >/dev/nul | II | b. more file.tx | t c. more file.txt · | <> cat | d. none of the above |
| | | | | | | |
| 339) User space | e and kerne | el space are | defined by: | | | |
| a. Kernel | | b. Hardv | ware-CPU | c. Both 1 & | 2 | d. Administrator |
| | | | | | | |
| 340) Conventio | nal RTOS u | ses | | | | |
| a. only kernel s | | | | nly user space | | |
| c. may be user | - | kernel space | | one of the above | | |
| 2 | - 12 2 2 2 2 1 1 1 2 | | 3.11 | | | |
| RA1) Which CDI | I schedulin | o algorithm | is the Proomn | tive scheduling? | | |
| • | | e (FCFS) | - | Robin (RR) | c. Both | d. None of the above. |
| a. 11131 COIII | CINSUSE(V | c (1 Cl 3) | b. Noulla | MODITI (MM) | c. botti | u. None of the above. |

PG DAC Feb 20 Operating System Question Bank

| 342) | which CPU scheduling | g algorithm may suffer from the Star | vation Problem | |
|------|----------------------|--------------------------------------|------------------------|----------------|
| a. | Round Robin (RR) | b. First Come First serve (FCFS) | c. Priority scheduling | d. None of the |

above.

| 343) A | Multithreaded | programming | Benefits |
|--------|---------------|-------------|----------|
|--------|---------------|-------------|----------|

a. Increase Responsiveness to user. b. Utilization of multiprocessor architecture.

42) Which CDU askeduling also ither was a suffer from the Chamption Duckland

c. Resource Sharing d. All of above

344) Circular waiting is

a. not a necessary condition for deadlock

b. a necessary condition for deadlock, but not a sufficient condition.

c. a sufficient condition

d. None of the above.

345) In an operating system using paging, if each 32-bit address is viewed as a 20-bit page identifier plus a 12bit offset, what is the size of each page?

a. 2^12 =4096 bytes b. 2^20 bytes c. 20 byte d. None of the above.

346) Advantage of memory management using virtual memory

- a. More Process can be loaded in the momery, to try to keep the processor busy
- b. A process whose image larger than memory can be executed
- c. Both 1 & 2
- d. None of the above.

347) Following is not a Disk scheduling algorithm:

a. First Come First serve (FCFS) b. Round Robin c. SCAN d. LOOK

348) Which of the following condition is necessary for the deadlock

a. Mutual exclusion and Hold-and-wait b. No preemption and circular wait

c. Both 1 & 2 d. None of the above.

349) LOOK disk scheduling algorithm:

- a. Select the request with minimum seek time from current head position.
- b. Moves the head from one end of the disk to other end, servicing request along the way.
- c. Moves the head only as far as the final request in each direction, then it reverse direction immediately, without first going all the way to the end of the disk.
- d. None of the above.

350) Thrashing is:

a. CPU scheduling algorithm b. disk-scheduling algorithm c. High Paging Activity d. None of the above.

PG DAC Feb 20 Operating System Question Bank

351) Spooling

 In spooling, a process writes its output to a temporary file rather than to an output device, such as a

printer

- In spooling, a process writes its output to an output device, such as a printer c.
 Both 1 & 2
- d. None of the above.
- 352) A "critical section" of code is
- a. A section that is executed very often, and therefore should be written to run very efficiently.
- b. A section of the program that must not be interrupted by the scheduler.
- c. A section of the program that is susceptible to race conditions, unless mutual exclusion is enforced. d. A section of the code executed in kernel mode
- 353) The OS uses a round robin scheduler. The FIFO queue of ready processes holds three processes A, B, C in that order. The time quantum is 18 msec. A context switch takes 2 msec. After running for 13 msec, B will block to do a disk read, which will take 30 msec to complete. Trace what will happen over the first 100 msec.

What is the CPU efficiency over the first 100 msec?

a.80% b.70% c.90% d.100%

- 354) "Time Quantum" in Round Robin Scheduling algorithm:
- Time between the submission and completion of a process.
- b. Time for the disk arm to move to the desired cylinder
- c. Maximum time a process may run before being preempted
- d. Time required to switch from one running process to another
- 355) An OS uses a paging system with 1Kbyte pages. A given process uses a virtual address space Of 128K and is assigned 16K of physical memory. How many entries does its page table contain?

a. 1024 b. 128 c. 512 d. 64

356) What is the "turnaround time" in scheduling algorithms? a.

Time for a user to get a reaction to his/her input.

- b. Time between the submission and completion of a process
- c. Time required to switch from one running process to another
- d. Delay between the time that a process blocks and the time that it unblocks
- 357) "chmod" command in Linux
- a. Change the operating system mode
- c. Change Access mode of file

b. Change the command mode

d. None of the above.

358) "grep" Command is used

| a. b. | make each column in combine a file and wr | | • | | | |
|------------|--|-----------------------------|-----------------------------------|--|------------------------|---------------------|
| c. | search a file for lines | containing a gi | iven format. | d. None of t | the above. | |
| 359) a. | A program which is lo | aded into mem b. Job. | | g is commonly refer c. Process. | red to as a: | d. Program |
| a. | Bankers Algorithm is u Deadlock Characteriza eadlock avoidance | | b. Deadlock Han d. Deadlock Do | | | |
| - | To enable a process to TLB. b. Frag | _ | | nory allocated, we us nys. d. None of the | | |
| - | A is a memory Spool | area that stor b. Buffer | es data while the c. Cache | / | All D | es: |
| 363) | The command used to | | | | | |
| a | Is –I | b. ls –a | | . Is –t | d. ls –r | |
| | The file stores | | | | | |
| a. | /lib | b. /mnt | C | . /etc/fstab | d. /usr | /local |
| - | In Linux commar current working direct | | / / | working directory & | commar | nd is Used to print |
| | cd, pwd | b. pwd | | c. cd, cp | d. cp, d | cd |
| 366) | Is a special use | er who has ulti | mate privilege on | Linux system: | | |
| a. abo | Any user | | iper user | c. Administr | ator | d. None of the |
| 367) a. | In Linux, we can displadisplay | ay the content b. show | - | ng the command: c. cat | d. All c | of the above |
| - | Which command is us | _ | = - | ? d. None of the | ahovo | |
| a. | change group | b. chgrp | c. changep | u. None of the | anove | |
| 369) a. | If more than one proc Lowest Priority. | | | | the d. No Priority. | |
| 370) | In Batch processing sy | stem the mem | ory allocator are | also called as | | |
| - | I ong — term schedule | | • | Short - term sched | – uler | |

| c. Medium – term scheduler | | | | d. Batch – term scheduler. | | | |
|----------------------------|---|--|---------------------------|---|--|---------------------|--|
| - | Wait until the desire | ed sector of a disk | comes under | the R/W head as the | e disk rotates. ⁻ | This time | |
| a. | seek time | b. latency time | | c. transmission time | e d. Re | ead/Write time | |
| 372) | All other processes | wanting to enter t | heir respectiv | ve critical regions are | kept waiting i | n a queue called as | |
| a. | Ready queue. | b. Waiting queu | ie | c. Semaphore queu | ie. | d. Critical queue. | |
| 373) | There would be son | ne time lost in turn | ing attention | from process 1 to p | rocess 2 is calle | ed as | |
| a. Pr | ocess transferring. | b. Process switc | ching | c. Process turning. | d. Co | ontext switching | |
| | | ting from 0,you ski | p two sector | in which you and then number th | e sector as 1ar | | |
| 375) | An alternative to th | e scheme of DMA | is calle <mark>d</mark> | | | | |
| a. | Programmed I/O. | b. Mapped I/O. | c. I/O | Mapped I/o | d. I/O Contr | oller | |
| prod Page c. Pa | cess to which they are Map Table (PMT). age Table Entry (PTE) processes to text switching). | re allocated. This is end to be faster, sin | b. Page France. Disk Bloc | s in terms of whethe intaining another da me Data Table (PFDT k Descriptor (DBD). not have to go to the c. Kernel pro | ta structure cal). kernel for eve | ry Rescheduling | |
| d. | neavyweight proces | sses. D. Lightweig | nt processes. | c. Kernei pr | ocesses. u. sys | tem processes | |
| 378) | To know the name Shell). a. \$0 | | | lowing command (Bo c. \$2 d. | ourne \$9 | | |
| 379) | To hold the exit sta a. \$\$ | | c. \$/ | command is u d.\$ | sed. | | |
| 380) | To know the Proces | | process c. \$/ | command is used d. \$ | d. a. | | |
| 381) a. | To know the path o | f the Shell co b. CDPATH | mmand is us c. SHE | | | | |

PG DAC Feb 20 Operating System Question Bank

| 382) | To print a file i | in Linux which comm | and is used | | | |
|-------------|----------------------------|---|------------------|---------------|-------------------|---------------------------------|
| a. | print | b. ls –p | c. Ip | or | d. None | |
| 383) | To create an a | dditional link to an e | xisting file, wh | nich comma | and is used | |
| a. | In | b. sbln | | с. ср | d. none | |
| 2041 | The Linux com | mand "cp ch? book" | | | | |
| • | | s starting with ch to the | ha diractory b | a a l | | |
| a. h | = ' | s with three-characte | | | h ch to the direc | tory book |
| b. c. | | ether a file starting w | | | | tory book |
| d. | None of the a | _ | THE CHICKISTS II | ir the direct | ory book | |
| 385) | . Command us | ed in shell to read a l | ine of data fro | om termina | als | |
| a. | rline | b. lin | e | | c. Iread | d. None of these |
| | | CI. | | 7. / | , 0 | A . |
| 386) | In vi, to change | e a word in command | d mode, one h | nas to type | intri | |
| a. | CW | b. wc | | c. lw | d. none | |
| 387) | What would b | e the output of the fo | ollowing shell | script? | | |
| foo= | 10 x=foo eval y | /='\$'\$x echo \$y | | | | |
| a. | foo | b. 10 | c. x | | d. \$x | |
| try a | again" read done exit 0 | ng shell script echo "E tches with 'secrete' i | | | | != "secrete"]; do echo "Sorry, |
| b. | The shell scrip | t gives error in while | statement | | | |
| c. | Irrespective of | f the users input, it al | ways prints " | Sorry, try a | gain" | |
| d. | If user enters | secrete then shell scr | ipt exits othe | rwise it wil | I read pas once a | again |
| 389) don | • | the following shell sc | ript would be | : for var in | DAC August 200 | 5 do echo \$var echo " C-DAC " |
| a. D | AC August 2005 | 5 | b. | C-DAC C-D | AC C-DAC | |

| a. a | -2, b-4, c-3, d-1 | b. a-3, b-2, | c-4, d-1 | c. a-1, b-2, c-3, | d-4 | d. a-4, b-2, c-2, d-1 | 1 |
| 397) | Which of the followi | ng file streams is | not opene | d automatically i | n a UNIX | program? | |
| a. S | tandard terminal | b. Standard | input | c. Standard ou | ıtput | d. Standard error | |
| 398) | Transfer of informat | ion to and from | main mem | orytakes place in | terms of | · • | |
| | a. Bytes | b. Words | c. Bits | d. I | Nibbles | | |
| 399) | Virtual Memory | | | | | | |
| a. | is an extremely larg | e main memory | | | | | |
| b. | is an extremely larg | ge secondary me | mory | | | | |
| c. | is a type of memory | used in superco | mputers | | | | |
| d. | allows execution of | f processes that | may notbe | completely in m | emory | | |
| 400) | Page fault occurs wh | en | <u>.</u> | | | | |
| | he page is corrupted l | | | b. The page | e is in ma | in memory | |

| c. Th | ne page is not in ma | ain memory | d. One tries to divide a number by 0 | | | |
|------------------|-----------------------------|------------------------------------|--------------------------------------|---------------------------------|----------------------------------|--|
| 401) | An operating syste | m with multiprograr | mming capab | lity is one that | | |
| a. | allows several user | rs to use the same p | rogram at on | ce by giving each a sli | ce of time | |
| b. req | loads several inde uired | pendent processes | intomemory | and switches the CPI | J from one jobto another as | |
| C. | runs programs ove | er more than one pro | ocessor | | | |
| d. | None of the above | | | | | |
| 402) | Where does swap | space reside? | | | | |
| a. D | isk | b. RAM | c. ROM | d. On-chip c | ache | |
| 403) | A 1000 MB hard di | sk has 512-byte sec | tors. Each tra | ck on the disk has 100 | 00 sectors. The number of tracks | |
| a.10 | 24 | b.2048 | c.512 | d.1000 | | |
| 404) | Which of the follow | wing is not an advan | tage provided | d by shared libraries? | | |
| a. | They save disk spa | ce | | | | |
| b. | They save space in | main memory | | | | |
| c. | Multiple versions of | of the same library c | an <mark>be loade</mark> d | into m <mark>ain me</mark> mory | | |
| d. | None of the above | | | | | |
| 405) | Spooling is | | | | | |
| a. | The rewinding of t | apes after proces <mark>sin</mark> | g | | | |
| b. cop | The temporary sto e with it | orage and manag <mark>em</mark> | ent of outpu | t to printers and other | er output devices until they can | |
| c. | The recording of a | ll user activities in a | log file | | | |
| d. | None of the above | | | | | |
| - | | | | errupts. Interrupts ar | e a. | |
| | | e to operating syste | | | | |
| b. | _ | I from other comput | | | | |
| C. | None of the abo | | questing atte | ntion from the opera | iting system d. | |
| 407) | Which of the follow | = | | al section problem? | | |
| a. N | lonitor | b. Semaphore | c. Crit | ical Region construct | d. Segmentation | |
| 408) | . System calls are in | nvoked by using | · | | | |
| a. So | oftware interrupt | b. I | Polling | c. Indirect jump | d. A privileged instruction | |

| 409) | Paging is the transfe | er of pages betwee | en main memory | and the | · | | |
|--------|--|-----------------------------------|--------------------------------|---|--|--|--|
| a. Ke | ernel | b. Computer sys | tem c. Au | xiliary store | d. Output device | | |
| - | Which of the follow ained in a file? | ing commands is ι | used to count the | total number of | lines, words and characters | | |
| a. co | unt p | b. wc | c. wcount | d.countw | | | |
| 411) | The size of the virtu | al memory depen | ds on the size of t | he | | | |
| a. Ad | ddress bus | b. Data b | us c. Me | emory bus | d. None of the above | | |
| a. | What do you mean When a device has cessor then stops w | data to transfer it | makesan interru | - | t needs your attention, the | | |
| | • | essor, if you type | to muchthe comp | • | ose down theillegal application atterrupt to let youthere is no more | | |
| 413) | Multiprogramming | systems | | | | | |
| a. | Are easier to develo | op than singleprog | ram <mark>ming sys</mark> tems | | | | |
| b. | Execute each job fa | ster | | | | | |
| c. | Execute more jobs | in the same time | period | | | | |
| d. | Are used only one l | arge mainframe Co | omputers | | | | |
| 414) | The components th | at take data ar <mark>e lo</mark> | cated in the | | | | |
| a. In | put devices | b. output device | c. systen | <mark>n un</mark> it d. stora | ge component | | |
| 415) | What is one of the a | advantages of Pagi | ng? | | | | |
| | does not suffer fron does not suffer fron | = | | b. It does n d. All of the | ot suffer from spooling e above | | |
| 416) | • | computer is proce formation | • | order to provide o. Output | useful c. | | |
| Kern | el | d. Communic | ation | | | | |
| a. Fix | Which of the folloged partition and the contiguous of the contiguous of the contiguous which will be contiguous on the contiguous of the c | | | es does not allow b. Dynami le dynamic partit | · | | |
| J. 511 | -o-o acci contiguou | 2 33 | a. nelocatat | a ; a i i i o pai tii | | | |
| • | . Which of the followiply the page frame | - | • | g the address of | the page frame? a. | | |

PG DAC Feb 20 Operating System Question Bank

Divide the page frame size by the page frame number

Add the page frame number and the page frame size

b.

c.

c.

1 and 2

| d. M | ultiply the page frame number by the Displacement |
|--------------------------------|--|
| a. Pagi resoluti which c | hich of the following concept is best at preventing page faults? 3 ng b. Hit ratios c. The working set d. Address location ion 420) The total effect of all CPU cycles, from both I/O-bound and CPU-bound jobs, approximates of the following distribution curves? ssian distribution b. Poisson distribution c. Lorentzian Distribution d. Random Distribution |
| • | hich of the following storage allocation scheme results in the problem of fragmentation? iguous storage b. Non-contiguous storage c. Indexed storage d. Direct storage |
| • | hich of the following commands in UNIX gives the user the capability of executing one program from er program? b. fork c. exexv d. nohup |
| 423) W a. Dead | hat does a cycle in a wait-for graph indicat <mark>e? Ilock b. Preemptive c. Non-Preemptive d. None</mark> of the above |
| a. | that kind of CPU burst an I/O-bound program would typically have? Long b. Short c. Average d. All of the pove |
| 425) UI a. LRU | NIX uses the page replace <mark>ment alg</mark> orithm. b. MRU c. FCFS d. FIFO |
| | ne command will display the absolute pathname for the directory that you are working in. dir b.pwd c.ls d. whereami |
| • | Which command would you use to create a sub-directory in your home directory? a. mkdir b. dir c. cp d. rm |
| 428) W a.ls | hich command can be used to display the contents of a file on the screen? b.cat c. dog d. grep |
| • | hat is the Process Input Queue? collection of processes |
| b. A | collection of processes on the disk that have already executed collection of processes on the disk that are waiting to be brought into memory for execution d. Both |

| 430) | What | is Swapping? |
|------|------|--------------|
| | | _ |

- The process of moving a process within memory to and from the backing store a.
- The process of moving a process within memory to backing store b.
- The process of moving a process to memory c.
- All of the above d.

| 431) | Using the | SJF algorithm, | which | process is | allocated | the CPU first?3 |
|------|-----------|----------------|-------|------------|-----------|-----------------|
| | | | | | | |

- a. The process that requests the CPU first
- b. The process that requests the CPU last
- c. The process with the smallest CPU execution time
- d. None of the above
- 432) Which of the following is not a scheduling algorithm?
- a. First-Come First-Serve
- **b. Round Bear** c. Shortest Job First d. None of the above
- 433) Which process is allocated the CPU first in FCFS algorithm?
- a. The process that requests the CPU first
- b. The process that requests the CPU last
- c. Processes are allocated the CPU randomly
- d. None of the above
- 434) What will be the order when information is processed with direct access?
- a. Any order
- b. Sequential order
- c. Non-sequential order
- d. None of the above
- 435) What will be the order when information is processed with sequential access?
- a. Any order
- **b. Sequential order** c. Non-sequential order
- d. None of the above
- 436) A memory management technique used to improve computer performance is Selecting memory chips based on their cost
- Storing as much data as possible on disk
- Using the cache to store data that will most likely be needed soon c.
- Preventing data from being moved from the cache to primary memory d.
- 437) What do you mean by defragmentation?
- keyboard that allows for a more natural positioning of your arms and hands.
- b. The time it takes to read/write head to moveto a specific data track; one of the delaysassociated with reading or writingdata on acomputer disk drive.
- Pointing device you can use instead of a mouse. These devices sense the position of your finger and then c. move the pointer accordingly.
- A utility that reduces the amount of fragmentation by physically organizing the contents of the disk to d. store the pieces of each file contiguously.
- 438) . Which of the following memory management schemes optimizes fragmentation? a. Single-user contiguous scheme
- Fixed partition

| c. d. | Dynamic partition Relocatable dynamic partitions |
|------------------------|--|
| 441) | The is used to store the highest location in memory accessibleby each program. |
| 442) | is the process of collecting fragments of available memory space into contiguous blocks by moving programs and data in a computer's memory or disk. |
| 443) | Which of the following are the disadvantages of a fixed partition scheme (choose all that apply)? a. Requires that the entire program be loaded into memory |
| b. | Requires that the entire program be stored contiguously |
| c. | Requires that the entire program remain in memory until the job is completed |
| d. | Does not allow multiprogramming |
| 444) | The phenomenon of partial usage of fixed partitions and the coinciding creation of unused spaces within the partition is called |
| 445) | Computers use the language to process data. |
| a. ´ | Processing b. kilobyte c. Binary d. Representational |
| | |
| - | Round-robin scheduling is |
| a. | Non- preemptive b. It depends c. Preemptive d. None of the above |
| 447) | Binary Semaphores are used for . |
| | resource allocation b. critical sections c. mutual exclusion d. synchronization |
| | |
| - | What dispatcher does? |
| | Select the process from the ready queue b. Run the process from the ready queue |
| c. Se | elect and run the process from the ready queue d. None of the above |
| 449) | Which one is the correct statement regarding thread? a. |
| | cal extension of the process. |
| b. | Very similar to the process. |
| c. | Threads have there own address space they do not use the process address space. |
| d. | Threads share the same address space that is used by the process |
| 450) | During process execution, which state transaction, is not possible? |
| - 30, а. | Ready state to running state b. Running state to block state |
| | ock state to terminate state d. Block state to ready state |
| | |
| 451) | signal generate when we try to access the illegal memory location using invalid pointer. |

| a. | SIGSTOP | b. SIGSEGV | c. SIGTERM | d. SIGNULL | |
|----------|---------------------------|------------------------------------|--|---|------------------|
| 452) | Which Inter Pro | ocess Communication b. FIFO | n mechanism is fastest to c. Shared Mei | o exchange the data between mory d. Message | = |
| 453) | Bootstrap load | er is | | | |
| a. | A program, wh | ich resides in the use | r space. k | o. A program, which resides | in ROM. |
| c. A | program, which | resides in the RAM. | d. A progra | am, which is a module of th | ne kernel space. |
| 454) | The page table | entry contains | · | | |
| a. | | n regarding given pag | | | |
| b. | the informatio | n regarding given seg | ment is valid or not. | | |
| C. | | | e table is valid or not. | | |
| d. | All of the above | е | | T. | |
| 455\ | DOCIN allegand | Clarit | Marian Maria | no troi A | |
| • | • | | on in Linux schedules | | -6+ |

| 456) | Segmentation I | eads to | | | |
| a. | External Fragm | | ernal Fragmentation c. F | Both 1 and 2 d. All of the a | hove |
| . | zacerriar r ragin | ST III. | That i ragine i racion or a | | |
| 457) | In static priority | y based scheduling | | | |
| a. | · · | | the design and not chan | ged during execution. | |
| b. | Priorities are d | ecided at the time of | design and may be chan | ged during execution by Al | Pls. |
| c. | Priorities are d | ecided by the sche <mark>du</mark> | ler during execution. | | |
| d. | All of the abov | e | | | |
| 458) | Paging leads to |) | | | |
| 459) | a. Internal Frag above | gmentation | b. External Fragment | ation c. Both 1 and 2 | d. All of the |
| 460) | Conventional F | RTOS uses | _ | | |
| a. | only kernel spa | ice. | _ | b. only user space. | |
| c. m | ay be user spac | e and kernel space. | d. None of the | e above | |
| 461) | With any Disk S | Scheduling Algorithms | s, Performance depends | on | |
| a. Nu | mber of reques | sts | b. Number and types | of requests | |
| c. Tv | pes of requests | | d. None of the above | | |

| 462) | How can we get the | information about | the CPU o | nthe Linux system? | | |
|-------|------------------------|-----------------------------------|-------------|--|------------|-----------------------------|
| a. ca | nt /usr/cpuinfo | b. cat /proc/cլ | puinfo | c. cat /root/proc/cpuir | nfo d. c | at /root/usr/cpuinfo |
| - | Which is the Linux k | = | | wing and what is locati nage and location is /u | | file system? a. |
| c. vn | nliunz and location is | /boot | d. kimage | and location is /usr | | |
| - | inode number repre | <u> </u> | h : | all types of files on the | file syste | m uniquely |
| | I process running on | | | of the inode in the file | = | iii uiiiqueiy. |
| 465) | Which one is defaul | t shell for the Linux | ? | | | |
| a. | csh | b. tcsh | | c. ksh | | d . bash |
| 466) | Which statement is | true? | | 7 / | · A | |
| a. | Process is a passive | entity 7/17/7/ | 1111 | Mantri | | |
| b. | We cannot divide p | rocess in further thr | eads. | LVACUICUIC | | |
| c. | Process is an active | instance of the pro | gram. | | | |
| d. | Threads do not use | the memory spacep | rovided b | y the process. | | |
| 467) | Which module gives | control of the CPU | to the pro | cess se <mark>lected by</mark> the sh | nort-term | scheduler? |
| a. | none of the mention | ned b. | interrupt | c. dispatcher | r | d. scheduler |
| 468) | The interval from th | e time of submi <mark>ssio</mark> | n of a pro | ces <mark>s to the t</mark> ime of com | pletion is | termed as |
| a. | turnaround time | b. waiting | time | c. response t | ime | d. throughput |
| | In priority schedulin | g algorithm a. | | | | |
| | e of the mentioned | | اماناما | | | |
| | equal priority proce | | | .•• | | |
| C. | | the process with his | | | | |
| d. | | the process with lov | vest priori | ty | | |
| 470) | Time quantum is de | | | | | |
| a. | priority scheduling | _ | b. | round robin schedulin | | |
| b. | multilevel queue sc | heduling algorithm | | d. shortest job sch | neduling a | lgorithm |
| 471) | Which one of the fo | llowing can not be s | cheduled | by the kernel? | | |
| a. | none of the mention | ned b. process | 5 | c. kernel level threa | d | d. user level thread |
| 472) | The two steps of a p | process execution ar | e : (choos | e two) | | |
| а | OS Burst | h Memor | v Rurst | c I/O Burst | | d CPU Burst |

PG DAC Feb 20 Operating System Question Bank

473) Turnaround time is:

- a. the total time spent in the ready queue
- b. the total time spent in the running queue
- c. the total waiting time for a process to finish execution
- d. the total time from the completion till the submission of a process

474) Complex scheduling algorithms:

- a. are very appropriate for very large computers
- b. use minimal resources
- c. use many resources
- d. All of these

475) The FIFO algorithm:

- a. first executes the job that needs minimal processor
- b. first executes the job that has maximum processor needs
- c. first executes the job that came in first in the queue
- d. first executes the job that came in last in the queue

476) The offset 'd' of the logical address must be:

- a. **between 0 and segment limit** b. greater than segment limit
- c. greater than the segment number d. between 0 and the segment number
- 477) The address of a page table in memory is pointed by
- a. page register b. program counter c. page table base register d. stack pointer
- 478) The page table contains
- a. page size b. none of the mentioned
- c. page offset d. base address of each page in physical memory
- 479) In contiguous memory allocation: a.

None of these

- b. each process is contained in a single contiguous section of memory
- c. the memory space is contiguous
- d. all processes are contained in a single contiguous section of memory
- 480) The operating system and the other processes are protected from being modified by an already running process because :
- a. they are in different logical addresses
- b. they are in different memory spaces
- c. they have a protection algorithm
- d. every address generated by the CPU is being checked against the relocation and limit registers

| | ple processes at o | | | a sized partitions, each | i partition may contain | c |
|-----------|--|-----------------|--------------|---|-------------------------|---|
| | actly one process | | | ast one process | | |
| 482) | In internal fragme | ntation, men | nory is inte | rnal to a partition and | : | |
| a. | is being used | b. None | of these | c. is not being used | d. is always used | |
| | Another solution these | to the proble | n of exterr | nal fragmentation prob | plem is to: a. | |
| | permit larger pro | | | | | |
| | permit smaller pr | | | • | | |
| d. | permit the logica | i auuress spa | ce or a pro | cess to be noncontigu | ous | |
| a. | is ge first fit, best fit, we one of these | 00. 7 A7 | b. w | and orst fit, best fit, first f t fit, first fit, worst fit | tri | |
| 485) | External fragment | tation exists v | vhen : | | | |
| | | | | the total memory is fr | | |
| b. | _ | - | satisfy a r | equest but it is not co | ntiguous | |
| 486) | c. None of e total memory is Physical memory pages b. | insufficient to | fixed-sized | d blocks called | tore | |
| 487) | Every address ger | nerated by the | CPU is div | ided into two parts : (| choose two) | |
| | | page offset | | c. page number | | |
| 488) | The table o | ontains the b | ase addres | s of each page in phys | ical memory. | |
| - | · · · · · · · · · · · · · · · · · · · | process | | c. frame | d. memory | |
| | With paging there | | | ntation. c. either type of | d external | |

| | very low speed lo | _ | | | | |
| b. | very high speed I | ogic | d. a large | memory space | | |
| 491) | What is operating | svstem? | | | | |

PG DAC Feb 20 Operating System Question Bank

system service provider to the application programs link to interface the hardware and application programs b. all of the mentioned c. collection of programs that manages hardware resources d. 492) Which one of the following is not true? kernel is the program that constitutes the central core of the operating system b. kernel is the first part of operating system to load into memory during booting kernel remains in the memory during the entire computer session c. d. kernel is made of various modules which can not be loaded in running operating system 493) Which one of the following error will be handle by the operating system? a. lack of paper in printer b. power failure c. connection failure in the network d. all of the mentioned 494) The main function of the command interpreter is a. to handle the files in operating system none of the mentioned to get and execute the next user-specified command c. d. to provide the interface between the API and application program 495) By operating system, the resource management can be done via space division multiplexing b. none of the mentioned a. b. both (a) and (b) d. time division multiplexing 496) If a process fails, most operating system write the error information to a new file b. log file c. none of the mentioned d. another running process 497) Which facility dynamically adds probes to a running system, both in user processes and in the kernel? DAdd b. DLocate c. DTrace d. DMap a. 498) Which one of the following is not a real time operating system? b. VxWorks d. Windows CE a. **RTLinux** c. Palm OS 499) The OS X has a. hybrid kernel b. monolithic kernel c. monolithic kernel with modules d. microkernel

b. uniprocessing

500) The systems which allows only one process execution at a time, are called

a. uniprogramming systems

systems

51

| c. unitasking systems | d. none of the mentioned | |
|--|--|-------------------------------|
| 501) In operating system, each process has address space and global variables b. open files c. pending alarms, signals and signal hand d. all of the mentioned | | |
| 502) A process can be terminated due to | | |
| a. killed by another process | b. all of the mentioned | c. fatal error d. normal exit |
| 503) What is the ready state of a process? a. when process is unable to run until so b. when process is scheduled to run after c. when process is using the CPU d. none of the mentioned | er some execution | i ▲ |
| 504) The address of the next instruction to | | |
| a. process stack b. progra | am counter c. pipe | d. CPU registers |
| 505) The number of processes completed pa. Throughput b. Efficient 506) The state of a process is defined by: at the activity to next be executed by the process. the activity just executed by the process. the final activity of the process. | ency c. Output a. the current activity of the process | d. Capacity cess b. |
| 507) Which of the following is not the state | of a process ? | |
| a. New b. Waiting | c. Ready d. Terminated | e. Old |
| 508) The entry of all the PCBs of the current a. Process Register b. Process Ur | • | d. Process Table |
| 509) In a programmed input/output(PIO): a. the CPU writes one data byte to the day available b. the CPU receives an interrupt when the c. the CPU runs a user written code and | ne device is ready for the next by | |
| d. the CPU uses polling to watch the cor | ntrol bit constantly, looping to se | e if device is ready |
| 510) Fragmentation is | | |

PG DAC Feb 20 Operating System Question Bank

- a. fragments of memory words unused in a page
- **b.** fragments of memory words used in a page
- **c.** dividing the main memory into equal-sized fragments
- **d.** dividing the secondary memory into equal sized fragments
- 511) 516. Critical region is
- a. the portion of the main memory which can be accessed only by one process at a time
- b. a part of the operating system which is not allowed to be accessed by any process
- c. a set of instructions that access common shared resource which exclude one another in time d. none of the above
- 512) In a time-sharing operating system, when the time slot given to a process is completed, the process goes from the RUNNING state to the
- a. READY state
- b. BLOCKED state
- c. TERMINATED state
- d. SUSPENDED state
- 513) Pre-emptive scheduling, is the strategy of temporarily suspending a running process
- a. when it requests (I/O)

b. to allow starving

processes to run

c. before the CPU time slice expires

- d. none of the above
- 514) Some computer systems support dual mode operation—the user mode and the supervisor or monitor mode. These refer to the modes
- a. of memory access
- b. by which user programs handle their data
- c. by which the operating system executes user programs
- d. in which the processor and the associated hardware operate
- 515) In Round Robin CPU scheduling, as the time quantum is increased, the average turn around
- a. remains constant
- **b. varies irregularly** c. increases
- d. decrease
- 516) .Suppose that a process is in 'BLOCKED' state waiting for some I/O service. When the service is completed, it goes to the
- a. RUNNING state
- **b.READY** state
- c. SUSPENDED state
- d. TERMINATED state
- 517) To obtain better memory utilization, dynamic loading is used. With dynamic loading a routine is not loaded until it is called for. For implementing dynamic loading,
- a. special support from operating system is essential
- b. special support from hardware is essential
- c. special support from both hardware and operating system are essential
- d. user programs can implement dynamic loading without any special support from the operating system or the hardware.

PG DAC Feb 20 Operating System Question Bank

518) Semaphores are used to solve the problem of

a. race condition b. mutual exclusion c. process synchronization d. Both (B) and (C)

519) Dijkstra's banking algorithm in an operating system solves the problem of

a. mutual exclusion b. context switching c. deadlock avoidance d. deadlock recovery

520) Virtual memory is

a. an extremely large main memory
b. an extremely large secondary memory
c. a type of memory used in super computers
d. an illusion of an extremely large memory

521) 526. Overlay is

a. a specific memory location

b. a part of an operating system

c. overloading the system with many user files

d. a single contiguous memory that was used in the olden days for running large programs by swapping.

522) The only state transition that is initiated by the user process itself is

a. block b. wakeup c. dispatch d. none of the above

523) Kernel is

a. the software which monitors the operating system

b. the set of primitive functions upon which the rest of operating system functions are built up

c. considered as the critical part of the operating system

d. none of the above

524) Sector interleaving in disks is done by

a. the operating system b. the disk manufacturer

c. the disk controller cord d. none of the above

525) Dirty bit is used to show the a.

wrong page in the memory

b. page with corrupted data

c. page that is less frequently accessed

d. page that is modified after being loaded into cache memory

526) The first-fit, and the worst-fit algorithm can be used for

a. linked allocation of memory b. indexed allocation of memory

c. contiguous allocation of memory d. all of the above

PG DAC Feb 20 Operating System Question Bank

527) In a paged memory, the page hit ratio is 0.35. The time required to access a page in secondary memory is equal to 100 ns. The time required to access a page in primary memory is 10 ns. The average time required to access a page is

- a. 3.0 ns
- b. 68.0 ns
- c. 68.5 ns
- d. 78.5 ns

528) In a multi-user operating system, 20 requests are made to use a particular resource per hour on an average. The probability that no requests are made in 45 minutes is

- a. e-15
- b. e-5
- c. 1 e-5
- d. 1 e-10

529) Disk scheduling involves deciding

- a. which disk should be accessed next
- b. the order in which disk access requests must be serviced
- c. the physical location where files should be accessed in the disk
- d. none of the above

530) In a multiprogramming environment

- a. more than one process resides in the memory
- **b.** the programs are developed by more than one person
- c. the processor executes more than one process at a time
- **d.** a single user can execute many programs at the same time

531) In which of the following directory systems, is it possible to have multiple complete paths for a file starting from the root directory?

- a. Single level directory
- b. Two level directory
- c. Tree structured directory
- d. Acyclic graph directory

532) Which of the following is true?

- The linkage editor links object modules during compiling or assembling.
- b. The linkage editor links object modules and resolves external references between them before loading.
- c. The linkage editor resolves external references between the object modules during execution time.
- d. The linkage editor is used to edit programs which have to be later linked together.

533) Fence register is used for

- a. file protection
- b. CPU protection
- c. memory protection
- d. all of the above

534) If the property of locality of reference is well pronounced in a program a.

the number of page faults will be more

- b. the number of page faults will be less
- c. execution will be faster
- d. Both (B) and (C)

PG DAC Feb 20 Operating System Question Bank

- 535) With a single resource, deadlock occurs
- a. if there are only two processes competing for that resource
- b. if there is a single process competing for that resource
- c. if there are more than two processes competing for that resource
- d. none of the above
- 536) Supervisor call
- a. is a call with control functions
- b. is a call made by the supervisor of the system
- c. are privileged calls that are used to perform resource management functions, which are controlled by the operating system.
- d. is a call made by someone working in root directory
- 537) Working set (t, k) at an instant of time, t, is the set of a.

k references with high frequency

- b. pages that have been referenced in the last k time units
- c. k future references that the operating system will make
- d. future references that the operating system will make in the next 'k' time units
- 538) Concurrent processes are processes that a.

overlap in time

- **b.** do not overlap in time
- **c.** are executed by a processor at the same time
- **d.** none of the above
- 539) In paged memory systems, if the page size is increased, then the internal fragmentation generally **a. becomes more** b. becomes less c. remains constant d. none of the above
- 540) Which of the following is an example of a SPOOLED device?
- a. The secondary memory device in a virtual memory system.
- b. A line printer used to print the output of a number of jobs.
- c. The terminal used to enter the input data for a program being executed. d. None of the above
- 541) The page replacement policy that sometimes leads to more page faults when the size of the memory is increased is
- **a. FIFO** b. LRU c. no such policy exists d. none of the above
- 542) An operating system contains 3 user processes each requiring 2 units of resource R. The minimum number of units of R such that no deadlock will ever occur is
- a. 3
- b. 4
- c. 5
- d. 8

V operations were completed on this semaphore. If the final value of the semaphore is 5. x will be

543) At a particular time of computation, the value of a counting semaphore is 7. Then 20 P operations and 'x'

| 544) Memory protection is of no use in a a. single user system b. non-multitasking system | |
|---|----------|
| a. single user system b. non-multitasking system c. non-multiprogramming system d. none of the above | |
| 545) Which of the following are single-user operating systems? a. MS-DOS b. UNIX c. XENIX d. Both (A) and (C) | |
| 546) The size of the virtual memory depends on the size of the a. address bus b. data bus c. main memory d. none of the above | |
| 547) A computer system has 6 tape drives, with 'n' processes competing for them. Each process may not drives. The maximum value of 'n' for which the system is guaranteed to be deadlock free is a. 1 b. 2 c. 3 d 4 | ed 3 |
| 548) Which of the following are true? a. Re-entrant procedures can be called recursively. b. Re-entrant procedures cannot be called recursively. c. A re-entrant procedure can be called even before the procedure has not returned from its previous d. Both (A) and (C) are true | ıs call. |
| 549) In a system that not support swapping a. the loader binds relocatable addresses to physical addresses. b. the compiler normally binds symbolic addresses to physical addresses. c. the compiler normally binds symbolic addresses (variables) to relocatable addresses. | and (C) |
| 550) Spatial locality refers to the problem that once a location is referenced a. it Will referenced again b. it will not be referenced again c. a nearby location will be referenced soon d. none of the above | |
| 551) Page fault occurs when a. the page is in main memory c. one tries to divide a number by 0 b the page is not in main memory d. the page is corrupted by application software | |
| 552) Determine the number of page faults when references to pages in the order - 1, 2, 4, 5, 2, 1, 2, 4. In that the main memory can accommodate 3 pages and the main memory already has the pages 1 and 2 page 1 having been brought earlier than page 2, (Assume LRU algorithm is used) a. 3 b. 5 c. 4 d. none of the above | |

| a. An c | | wing are real-time syste eservation system em | ms? b. A process contro d. Both (B) and (C) | l system |
|--|---|---|--|------------------------------------|
| Non-pr b. N c. B | reemption and c | and partial allocation | | |
| a.3 V o | perations | e, the value of a counting | - | ill become 7 after P operations |
| a. anb. boxc. and. no | etween two disjoint of the above Which of the fo | that share resources pint processes that do not use the same. | e resource supported by the operat | |
| 558) maxim true? a. D b. D c. U | A state is safe if num) in some or readlocked state readlocked state | the system can allocate der and still avoid deadl | resources to each procock. Which of the follow | |
| - | which of the fol nd-robin | lowing scheduling polici b. Shortest job first | | = |
| a. FAT: c. LWP | HRQ= = file allocation t P=light weight pr | | PCB= process control blo DMA=direct memory ac | |
| a LINII | | | c Windows NT | d None |

| 562) The following is | not a form of IPC | • | | |
|-------------------------|---------------------|---|--|---------------------|
| a. Semaphore | b. Pipe | c. Shared memo | ory d. Buffering | |
| 563) The fol. is a part | t of FAT | | | |
| a. Sector info | b. Disk type | c. Modified info | d. Date info | |
| 564) Device files in U | INIX are | | | |
| a. Device drivers | b. Special fi | les c. Pipes | d. Unstructured file | es |
| 565) The time of adn | nission of a job to | ready queue to comp | letion is : | |
| a. Turnaround time | b | . Burst time c | . Response time | |
| 566) The fol. Signal is | | | | |
| a. HREQ | b. HLDA | С. | | |
| DRQ | Chri | iting System | Inntri | |
| 567) The main purpo | ose(s) of an Opera | iting System | unul | |
| is/are: | | in g system | | |
| a. convenience for the | he user | b. efficient oper | ration of the computer sy | vstem |
| c. optimal use of cor | nputing resources | | the above | |
| · | - | | | |
| 568) The signal the k | eyboard sends to | the computer is a spe | cial kind of message calle | ed |
| a. keyboard request | b. keybo | oard <mark>controlle</mark> r | <mark>. interr</mark> upt controller d | . interrupt request |

| 569) The available ro | outing schemes ar | e : | | |
| a. fixed routing | b. virtua | a <mark>l routing</mark> c. d <mark>ynan</mark> | nic routing | |
| 570) The interval fro | m the time of sub | omission of a process t | o the time of completior | ı is |
| a. Turnaround t | time b | o. Waiting time | c. Response time | |
| 571) The I/O subsyst | em consist of: | | | |
| a. A memory man | agement compor | ent including bufferin | g, caching, and spooling | |
| b. A general devic | e-driver interface | | | |
| b. Drivers for specific | c hardware device | es . | | |
| a. All of the above | | | | |
| 572) Which of the fo | llowing CPU sche | duling algorithmswill p | prevent starvation proble | em? |
| a. Shortest-job-first | | | b. | |
| Priority-scheduling | | | | |
| c. Priorit echanism v | /-scheduling with | aging d. No | one of the above | |

PG DAC Feb 20 Operating System Question Bank

573) Which of the following statements is true for a deadlock state a.

The system cannot run any process

- b. The system can run processes barring those involved in the deadlock
- c. A running process cannot request any new resourced.
- d. All processes in the ready queue enter the wait queu
- 574) The problem of thrashing may be reduced by
- a. Using prepaging mechanism

b. Writing well structured programs

c. Both 1 and 2

d. Neither 1 nor 2

- 575) Which of the following statements is not true?
- a. A directory is a special type of file

b. A directory is used to store file attributes

c. A directory is used to store file data

d. A directory is used to store file access information

- 576) . Biometric devices are used for user authentication in
- a. Proof by knowlege method

b. Challenge response method

c. Proof by possession method

d. Proof by property method

- 577) A file system uses the contiguous space allocation mechanism for disk space allocation. For better utilization of disk space, this file system must use
- a. A garbage collection mechanism

b. A disk compaction mechanism

c. A linked-block allocation mechanism

d. An indexed-block allocation mechanism

- 578) Which of the following statements is true?
- a. A computer virus is a complete program that makes active attacks
- b. A computer virus is a program segment that makes passive attacks
- c. A logic bomb is a program segment that makes passive attacks
- d. A logic bomb is a program that makes active attacks
- 579) The purpose of virtual memory system is to a.

Allow multiprocessing

- b. Allow multiprogramming
- c. Allow batch processing
- d. Allow execution of a program that requires larger memory than the size of the physical main memory
- 580) Which of the following is NOT a part of a process control block:
- a. Values of CPU registers

b. CPU scheduling information

c. Memory limits of the process

d. List of files accessible to the process.

- 581) Suppose the architecture of a computer system is layered into the following four layers -
- a. Operating systems software

b. users' applications software

c. hardware

d. programming environment software

| 582) | Which of the following | ς is a logical seqι | ience of the | four laye | ers from bott | om to top? | |
|--------------------------------------|---------------------------------|---------------------|--------------|---------------------|---------------------------|----------------|-------------------|

| a. Pe | entium b | o. Pentium Pro | c. Pe | ntium II | d. P | entium III | |
| 589) | The fastest storage ele | ment is – | | | | | |
| a. CE | D-ROM b | o. DRAM c. E | EDO-DRAM | d. | SDRAM | | |
| | | | | | | | |
| 590) | Which peripheral requ | ires the highest | data transfe | r rate? | | | |
| a. So | ound Card | b. Network ca | ard c. Ha | ard disk | d. Grap | hics Adapte | r |
| 591) | A virtual memory is red | quired for - | | | | | |
| a. | increasing the speed | | | | | | |
| b. | increasing the addressing modes | | | | | | |
| c. | overcoming the size lin | mitation of main | memory | | | | |
| d. | overcoming the size li | mitation of cach | e memory | | | | |
| 592) | When fork() is given | | | | | | |
| a. It | creates a child process | | b. Alloca | tes slot | in process ta | ble | |
| c. Returns 0 to parent & ID to child | | | d All of | d. All of the above | | | |

PG DAC Feb 20 Operating System Question Bank

| a. b. c. | A TSR is a program which will Be resident in the memory after termination of program Be called as and when the program is executed Terminate and Soon Remove the program from the memory |
|----------------|---|
| d. | All of the above |
| - | CPU performance is based on U width b. Clock speed c. Number of instructions executed per second |
| - | In the systems which do not have multiple CPUs, is the 'cache coherency' an issue while design? a Yes b. No |
| 596) | 80286 the addressing scheme is addressing c |
| a. 8 b | b. 16 bit c. 24 bit ` d. 28 bite. 32 bit |
| 597) : | Shell executes \$0 and returns the |
| a. Pa | rameters entered in the command line b. P <mark>rogram name c. All</mark> of the above |
| 598) a. /u: | Profile file is present in sr b. /usr/user1 c. /etc/admin d. None of the above |
| • | Peak Bandwidth of a 64-bit, 33 MHz based PCI bus would be: 3 MB/s b. 266 MB/s c. 512 MB/s d. 33 MB/s |
| | Main advantage of EISA bus over <mark>micro-ch</mark> annel b <mark>us was: offered more bandwidth over micro-channel b. It had software configurable devices</mark> |
| | offered more bandwidth over micro-channel b. It had software configurable devices was backward compatible with ISA d. It made the existing peripherals run faster. |
| CO1) 1 | Nation of the following devices is powerly managed. |
| a. SS | Which of the following devices is asynchronous? RAM b. EPROM c. Disk controllers d. All of the above. |
| • | Which of the following operating systems is available for non-intel platforms? a. Windows-NT b. Solaris c. linux d. all of the above. |
| | Cache memory refers to |
| | cheap memory that can be plugged into the mother board to expand main memory fast memory present on the processor chip that is used to store recently accessed data |
| | a reserved portion of main memory used to save important data |

a special area of memory on the chip that is used to save frequently used constants

d.

| Fil | l in the blanks: |
|------------|---|
| 1) | Single system image is obtained in case of |
| 2) | Turnaround Time refers to |
| 3) | Short-term Scheduler or CPU-Scheduler scheduler selects the process that is ready to execute to CPU. |
| 4) | Banker's algorithm is an example of _Deadlock avoidance. |
| 5) | is an example of Distributed operating system. |
| 6) | _Round Robin_ is an example of timesharing scheduling policy. |
| 7) | is an example of shareable resource and is an example for non shareable resource. Is an example of shareable resource and is an example for non shareable resource. Is an example of shareable resource and is an example for non shareable resource. Is an example of shareable resource and is an example for non shareable resource. |
| 8) | is to NT , where as is to DOS and is to UNIX. |
| 9) | Give the expansion of the following with reference to the operating systems concepts: FCB is |
| 10) | locs is |
| 11) | Throughput in case of multiprogramming is Number of programs processed by it per unit time |
| 12) | is process of modifying the addresses used in the address sensitive |
| 13) | A program is a Passive entity, whereas a process is a Active entity. |
| 14) 15) | Mutex is a _BinarySemaphore is the coincidence of high paging traffic and low CPU utilization. |
| 16) | FCFS stands forFirst Come First Served |
| 17) | The Scheduling policy in case of a batch processing system is |
| 18) | · |

| 19) | Multiprogramming degenerates tos and I/O bound jobs. | system if there is no proper mix of CPU | | |
|-----|--|---|--|--|
| 20) | DMA stands for _ direct memory access | | | |
| 21) | Protection of memory is ensured using | and | | |
| 22) | is forceful deallocation of a resour | ce. | | |
| 23) | SPOOLING stands for simultaneous peripheral operations on-line | | | |
| 24) | A operating system is an operat response from a computer system. | ing system which requires a timely | | |
| 25) | is a program in execution. | TAT | | |
| 26) | DOS is an example of user system. | | | |
| 27) | Unix is an example of user system. | | | |
| 28) | Unix uses scheduling policy . | | | |
| 29) | and are the goals of an operating system. | | | |
| 30) | is a distributed operating system. | | | |
| 31) | The determines which process is to be executed next. | | | |
| 32) | PSW stands for Pogram Status Word | | | |
| 33) | Mutex is an acronym for Abbrevations | | | |
| 34) | A tape is a Magnetic device. | | | |
| 35) | Single system image is obtained in case of | | | |
| 36) | Turnaround Time refers to | | | |
| 37) | Short-term Scheduler or CPU-Scheduler scheduler selects the process 38) is an example of Distributed operating system. | ess that is ready to execute to CPU. | | |

| 39) | Round Robin is an example of timesharing scheduling policy. |
|-----|---|
| 40) | is an example of shareable resource and is an example for nonshareable resource. |
| 41) | and are the popular page replacement algorithms. |
| 42) | Unix is a,, and operating system. |
| 43) | Single system image is obtained in case of 44) Turn around Time refers to |
| 46) | Short-term Scheduler or CPU-Scheduler scheduler selects the process that is ready to execute to CPU. Banker's algorithm is an example of _ Deadlock avoidance and are the popular page replacement algorithms. |
| 48) | A file is anything held onstorage. |
| 49) | Compaction is done when you have fragmentation. |
| 50) | is when more time is spent in paging than in actually running programs. |
| 51) | A thread is a Lightweight process. |
| 52) | The process of loading the OS into main memory is done by the |
| | The motivations behind networks are,, |
| 55) | SPOOLING stands for simultaneous peripheral operations on-line |
| 56) | Thrashing is the coincidence of high paging traffic and low CPU utilization. |
| 57) | is a path under execution. |
| 58) | The OS maintains information about each process in a record called |
| 59) | is a relation between number of page faults and number of page frames allocated to a process. |
| 60) | is the implementation method in case of MS-DOS for non-contiguous allocation. |
| 61) | is a mechanism whereby the output of one process is directed into input of another process. |

PG DAC Feb 20 Operating System Question Bank

| 62) | The time elapsed for position of Read/Write head under the desired sector is called |
|-----|---|
| 63) | , are the two ways to achieve relocation and address translation. |
| 64) | The CPU utilization is low when the system is |
| 65) | A space allocated in units of fixed size is called |
| 66) | A modified page is also called as page. |
| 67) | is an example of shareable resource and is an example for nonshareable resource. |
| 68) | is forceful deallocationof a resource. |
| 69) | Unix is an example of user system. |
| 70) | The determines which process is to be executed next. |
| - | rocess can change its state from block state to run state. Is this statement True or False? 1) erentiate between the CPU bound process and I/O bound process. |
| 2) | Can we prevent deadlocks by denying mutual-exclusion condition? Justify your answer. |
| 3) | What do you mean by locality of reference? |
| 4) | What is a dirty bit? Why is it used? |
| 5) | What is the difference between circu <mark>it switch</mark> ing and packet switching? |
| 6) | Justify the statement : |
| 7) | "It is possible to support multiprogramming without using timesharing. However it is impractical to support timesharing without using multiprogramming" |
| 8) | "Swapping improves/degrades the efficiency of system utilization". |
| 9) | Describe the cause of READYA RUNNING transition. |
| 10) | What do you mean by "protection" incase of operating systems? How is it implemented? |
| 11) | What is Access Control List? Where is it used? |
| 12) | What is a deadlock? How does it occur? |
| 13) | What do you mean by scalability? |
| 14) | What is a capability list? Where is it used? |
| 15) | Comment on the statement: |
| 16) | "Interactive processes should have low/high priority" |
| 17) | Name secondary storage devices and explain where they are typically used. |
| 18) | Which type of scheduler controls the degree of multiprogramming? |
| 19) | What is a race condition? |
| 20) | Which condition(s) is/are very necessary for a deadlock. Justify your answer. |
| 21) | What do you mean by a "kernel"? |

22) What do you mean by the "context" of a process?

PG DAC Feb 20 Operating System Question Bank

- 23) Give one difference between a .COM file and .EXE file in DOS.
- 24) Name the necessary conditions for a deadlock.
- 25) What is a critical section?
- 26) What is IOCS? What are it functions?
- 27) Explain advantages of distributed operating systems:
- 28) Name different scheduling policies and explain.
- 29) Differentiate between the logical address space and physical address space.
- 30) Explain in brief what you mean by: 1.Multiprogramming 2.Multiprocessing.
- 31) Name the five typical file operations.
- 32) Draw a block diagram showing the process transitions.
- 33) Can we prevent deadlocks by denying mutual-exclusion condition? Justify your answer.
- 34) How many different types of files are possible on UNIX operating system?
- 35) Name them.
- 36) What is demand paging?
- 37) Explain Distributed processing with the help of examples.
- 38) Differentiate between contiguous and non-contiguous memory allocation.
- 39) What Is deadlock? Give an example.

Explain the following:

- 1) Semaphores
- 2) Disk caching
- 3) Working set
- 4) Locality of reference
- 5) DMA
- 6) Non-preemptive OS

Long answer Questions:

- Consider a memory with 4 page frames, assuming that pages of a process are referenced in the following order:
- 2) 4,3, 2,1,4,3,5,4,3,2,1,5,2.
- 3) Show, which would be better FIFO or LRU.
- 4) Considering the above reference string show how Belady's anomaly occurs in case of FIFO.
- 5) How is memory re-used?
- 6) With the help of an example show the mapping from virtual address space to physical address space in case of virtual memory.
- 7) List the fields of the FCB and explain their use.
- 8) What is the difference between thread, process and Task?
- 9) What is the critical section problem? How is it handled?
- 10) Which condition(s) is/are very necessary for a deadlock? Justify your answer.
- 11) Discuss the use of Active file tables.
- 12) What constitutes the environment of a process?
- 13) What do you mean by "static and dynamic binding"?

- 14) What do you mean by an Inode? Where is it used?
- 15) How can a deadlock be avoided? Explain.
- 16) Write in detail the methods of LRU implementation.
- 17) Explain State Transition Diagram.
- 18) What is Inter-process communication?
- 19) Define the terms: Thread; process; Context of a process.
- 20) Describe the PC architecture with a block diagram
- 21) Discuss the various issues involved in Process Management
